Part I: Process design -- Introduction to design -- Process flowsheet development -- Utilities and energy efficient design -- Process simulation -- Instrumentation and process control -- Materials of construction -- Capital cost estimating -- Estimating revenues and production costs -- Economic evaluation of projects -- Safety and loss prevention -- General site considerations -- Optimization in design -- Part II: Plant design -- Equipment selection, specification and design -- Design of pressure vessels -- Design of reactors and mixers -- Separation of fluids -- Separation columns (distillation, absorption and extraction) -- Specification and design of solids-handling equipment -- Heat transfer equipment -- Transport and storage of fluids.

Sailing and cruising to distant shores can be as cheap or expensive as the pocket desires. This bestseller is about how to get the right boat, prepare it and organize the financial side of life, so that you can manage the costs.

For advanced undergraduate/ graduate-level courses in Automation, Production Systems, and Computer-Integrated Manufacturing. This exploration of the technical and engineering aspects of automated production systems provides the most advanced, comprehensive, and balanced coverage of the subject of any text on the market. It covers all the major cutting-edge technologies of production automation and material handling, and how these technologies are used to construct modern manufacturing systems.

Many textbooks on differential equations are written to be interesting to the teacher rather than the student. Introduction to Differential Equations with Dynamical Systems is directed toward students. This concise and up-to-date textbook addresses the challenges that undergraduate mathematics, engineering, and science students experience during a first course on differential equations. And, while covering all the standard parts of the subject, the book emphasizes linear constant coefficient equations and applications, including the topics essential to engineering students. Stephen Campbell and Richard Haberman--using carefully worded derivations, elementary explanations, and examples, exercises, and figures rather than theorems and proofs--have written a book that makes learning and teaching differential equations easier and more relevant. The book also presents elementary dynamical systems in a unique and flexible way that is suitable for all courses, regardless of length.

YEAR 11 Maths Quest General Mathematics - Preliminary Course provides comprehensive coverage of the five areas of study Financial mathematics Data analysis Measurement Probability and Algebraic modelling Full colour with photographs and graphics to support real-life applications Carefully graded exercises with many skill and application problems, including multiple-choice questions Cross references to relevant worked examples matched to questions throughout the exercises SkillSHEET icons linked to worksheets that assist students to revise and consolidate essential skills and concepts Comprehensive chapter summaries and chapter review exercises with practice examination questions A glossary of mathematical terms which defines terminology introduced in each unit Investigations, spreadsheet applications, and more.
