[Meiosis is a two-part cell division process in organisms that sexually reproduce. Meiosis produces gametes with one half the number of chromosomes as the parent cell. In some respects, meiosis is very similar to the process of mitosis, yet it is also fundamentally different from mitosis. The two stages of meiosis are meiosis I and meiosis II.](#)

In mitosis, the cell's nucleus divides once to give rise to 2 genetically identical diploid cells. In meiosis, however, there are two nuclear divisions. These two divisions, known as meiosis I and meiosis II, result in the formation of 4 haploid cells that are genetically different than the original cell.

Product Description This is a 3 page study guide or packet that covers the cell cycle with a focus on mitosis, but also includes interphase, cytokinesis, and a brief mention of cell division in prokaryotes. It is a useful class tool for students to organize information before an assessment. The following concepts are covered in this packet:

Mitosis Study Guide - Babyflix

The situation in meiosis is a wee bit more complicated than mitosis. In meiosis, homologous chromosomes pair (briefly) and each of the four chromatids in that pairing makes it into its own nucleus, giving rise to four haploid nuclei. Unlike mitosis, which occurs in one cell division event, meiosis occurs through two division events.
