Their main conclusions can be summarized as: In the absence of taxes, firm capital structure is irrelevant.

The Modigliani and Miller Propositions | 5-Minute Finance

Using the theory's assumptions, Modigliani & Miller demonstrate that an arbitrage opportunity forces the values to converge. Proposition 2 The second proposition states the company's weighted average cost of capital is a function of the company's business risk and will remain constant regardless of the capital structure.

Modigliani and Miller (MM) Theories | Formula | Example

The Modigliani-Miller theorem (of Franco Modigliani, Merton Miller) is an influential element of economic theory; it forms the basis for modern thinking on capital structure.

Modigliani-Miller theorem - Wikipedia

The Modigliani-Miller Proposition II Theory (MM II) defines the cost of equity is a linear function of the firm's debt/equity ratio.

Understand the Modigliani Miller Proposition with the ...

Miller and Modigliani theory mentions two propositions. Proposition I states that the market value of any firm is independent of the amount of debt or equity in capital structure. Proposition II...

MM Proposition I & II with Corporate Taxes - Video ...

Modigliani & Miller's revelations on the impact of capital structure on a company's value and cost of equity was pathbreaking in the world of finance. Modigliani & Miller's theory (often referred to as M&M or MM) is encountered by every finance student in the introduction to finance or foundations of finance class. Modigliani & Miller first espoused their theory in the article "The ...

Modigliani & Miller's Propositions in Finance (MM or M&M ...

The Modigliani and Miller approach to capital theory, devised in the 1950s, advocates the capital structure irrelevancy theory. This suggests that the valuation of a firm is irrelevant to the capital structure of a company. Whether a firm is highly leveraged or has a lower debt component has no bearing on its market value.

Capital Structure Theory - Modigliani and Miller (MM) Approach

Proposition 2 (M&M II): The second proposition for the real-world condition states that the cost of equity has a directly proportional relationship with the leverage level. Nonetheless, the presence of tax shields affects the relationship by making the cost of equity less sensitive to the leverage level.

M&M Theorem - Overview, Assumptions, Propositions

The Modigliani-Miller Proposition II Theory (MM II) defines cost of equity is a linear function of the firm's debt/equity-ratio.

The Modigliani-Miller Proposition I Theory (MM I)

The Modigliani-Miller theorem (M&M) states that the market value of a company is correctly calculated as the present value of its future earnings and its underlying assets, and is independent of...
