Updated, revised and reorganized, Coon, Mitterer and Martini's PSYCHOLOGY: MODULES FOR ACTIVE LEARNING, 15th Edition includes all-new chapter-specific learning outcomes and formative assessments based on Bloom's taxonomy. It is fully compatible with the new learning outcomes developed by the American Psychological Association. An emphasis on reflection, critical thinking and human diversity illustrates their importance as cross-cutting themes in psychology. In addition, each module cluster includes a full module devoted to skill development, highlighting skills that will help learners succeed both personally and professionally. The new edition retains the bestseller's engaging style, appealing visuals and detailed coverage of core topics and cutting-edge research. It builds on the proven modular format and on the teaching and learning tools integrated throughout. The Managing Contracts Module is to introduce those tools, techniques and methodologies for managing contracts that have been identified as being "best tested and proven" practices which have been found to work on "most projects, most of the time"; provide a logical or rational sequence showing when those tools or techniques would normally and customarily be used and in selected instances, show how to use those tools/techniques and/or where to find additional information on how to use or apply them.

This open access book summarizes the results of the European research project "Twin-model based virtual manufacturing for machine tool-process simulation and control" (Twin-Control). The first part reviews the applications of ICTs in machine tools and manufacturing, from a scientific and industrial point of view, and introduces the Twin-Control approach, while Part 2 discusses the development of a digital twin of machine tools. The third part addresses the monitoring and data management infrastructure of machines and manufacturing processes and numerous applications of energy monitoring. Part 4 then highlights various features developed in the project by combining the developments covered in Parts 3 and 4 to control the manufacturing processes applying the so-called CPSs. Lastly, Part 5 presents a complete validation of Twin-Control features in two key industrial sectors: aerospace and automotive. The book offers a representative overview of the latest trends in the manufacturing industry, with a focus on machine tools. .

Comprehensive, technically accurate, and up-to-date, HEAVY DUTY TRUCK SYSTEMS, 6E is the best-selling introduction to servicing medium- and heavy-duty trucks. Now in striking full color, the sixth edition helps users develop a strong foundation in electricity and electronics, power train, steering and suspension, brakes, and accessories systems and presents introductory material on servicing, safety, tools, and preventive maintenance. This genre I have named "politistics", as everything that can be said about the social politics, what here means political SF or various utopias, but critique of the democracy, too. The book looks like collection of Manifestoes of dozen political parties

(plus 2 supplements). They are quite different in their character, mainly ironical or even satirical, but entirely reasonable and scientifically sound. Must be said, though, that this is not entertaining reading, unless you find pleasure in the mere reasoning. | All Manifestos are different, they are not related one with the other, and in some places contradict one to the other, as it is normal for different parties. Their initials, which in Bulgarian original are 3 equal letters (but this is rarely maintained here), are the following: DDD, EEE, ZSG, IIE, CCW, NNO, FCP, BRD, USC, TTT, FFF, and CCC; plus some sentences in the Afterword, as also the Supplement "Hurray, is it possible?". Here the book is divided in 2 parts in the middle.

Experimental Robotics XV is the collection of papers presented at the International Symposium on Experimental Robotics, Roppongi, Tokyo, Japan on October 3-6, 2016. 73 scientific papers were selected and presented after peer review. The papers span a broad range of sub-fields in robotics including aerial robots, mobile robots, actuation, grasping, manipulation, planning and control and human-robot interaction, but shared cutting-edge approaches and paradigms to experimental robotics. The readers will find a breadth of new directions of experimental robotics. The International Symposium on Experimental Robotics is a series of bi-annual symposia sponsored by the International Foundation of Robotics Research, whose goal is to provide a forum dedicated to experimental robotics research. Robotics has been widening its scientific scope, deepening its methodologies and expanding its applications. However, the significance of experiments remains and will remain at the center of the discipline. The ISER gatherings are a venue where scientists can gather and talk about robotics based on this central tenet.
