Nakamura CNC Machines. Nakamura Tome is a world-leading manufacturer of CNC turn/mill, twin chuck multi-axis turning centres. Thanks to each machine being hand built by expert craftsman, quality is assured with an extremely high level of precision. It is thanks to their extreme accuracy and reliability that Ashby uses the Nakamura CNC machines.

Posted on April 20, 2018. A fast-growing County Kildare manufacturer is setting its sights on smashing the £2m sales barrier after investing in state-of-the-art CNC machine technology. P&T Precision Engineering, which currently employs 15 people at its Naas Industrial Estate facility, has purchased a Nakamura AS200 LMY twin spindle lathe that will help it take on new orders and work with harder materials.

This collection represents successful invited submissions from the papers presented at the 8th Annual Conference of Energy Economics and Management held in Beijing, China, 22 – 24 September 2017. With over 500 participants, the conference was co-hosted by the Management Science Department of National Natural Science Foundation of China, the Chinese Society of Energy Economics and Management, and Renmin University of China on the subject area of “ Energy Transition of China:

Opportunities and Challenges ” . The major strategies to transform the energy system of China to a sustainable model include energy/economic structure adjustment, resource conservation, and technology innovation. Accordingly, the conference and its associated publications encourage research to address the major issues faced in supporting the energy transition of China. Papers published in this collection cover the broad spectrum of energy economics issues, including building energy efficiency, industrial energy demand, public policies to promote new energy technologies, power system control technology, emission reduction policies in energy-intensive industries, emission measurements of cities, energy price movement, and the impact of new energy vehicle.

Nanocarbon and Its Composites: Preparation, Properties and Applications provides a detailed and comprehensive review of all major innovations in the field of nanocarbons and their composites, including preparation, properties and applications. Coverage is broad and quite extensive, encouraging future research in carbon-based materials, which are in high demand due to the need to develop more sustainable, recyclable and eco-friendly methods for materials. Chapters are written by eminent scholars and leading experts from around the globe who discuss the properties and applications of carbon-based materials, such as nanotubes (buckytubes), fullerenes, cones, horns, rods, foams, nanodiamonds and carbon black, and much more. Chapters provide cutting-edge, up-to-date research findings on the use of carbon-based materials in different application fields and illustrate how to achieve significant enhancements in physical, chemical,

mechanical and thermal properties. Demonstrates systematic approaches and investigations from design, synthesis, characterization and applications of nanocarbon based composites Aims to compile information on the various aspects of synthesis, properties and applications of nano-carbon based materials Presents a useful reference and technical guide for university academics and postgraduate students (Masters and Ph.D.)

This book disseminates recent research, theories, and practices relevant to the areas of surface engineering and the processing of materials for functional applications in the aerospace, automobile, and biomedical industries. The book focuses on the hidden technologies and advanced manufacturing methods that may not be standardized by research institutions but are greatly beneficial to material and manufacturing

industrial engineers in many ways. It details projects, research activities, and innovations in a global platform to strengthen the knowledge of the concerned community. The book covers surface engineering including coating, deposition, cladding, nanotechnology, surface finishing, precision machining, processing, and emerging advanced manufacturing technologies to enhance the performance of materials in terms of corrosion, wear, and fatigue. The book captures the emerging areas of materials science and advanced manufacturing engineering and presents recent trends in research for researchers, field engineers, and academic professionals.

Fullerenes became a new member of carbon allotropes in addition to diamond and graphite after the discovery of C₆₀ (carbon 60) by Kroto et al. in 1985. The model of C₆₀ was first proposed by Osawa in 1970. C₆₀ is a hollow spherical molecule composed of 60 carbon atoms that contains 12 five-membered rings and 20 six-membered rings and has the same structure as a soccer ball. In 2001, C₆₀ fullerene nanowhiskers (FNWs), which are single-crystal nanowhiskers solely composed of C₆₀ molecules, were discovered in a colloidal solution of lead zirconate titanate (PZT) with added C₆₀. This book focuses on the synthesis of FNWs, fullerene nanotubes, and fullerene nanosheets and describes the structural, mechanical, semiconducting,

and thermal properties, as well as bio-related and solar applications of FNWs and related fullerene nanomaterials.
