ESA - New view of 2012 solar activity  
The first images from ESA's Solar Orbiter are  
already exceeding expectations and revealing  
interesting new phenomena on the Sun. This  
animation combines a series of views captured  
with several remote-sensing instruments on  
Solar Orbiter between 30 May and 21 June  
2020, when the spacecraft was roughly halfway  
between the Earth and the Sun - closer to the

Sun than any other solar telescope ...

ESA - Closer than ever: Solar Orbiter's first views of the Sun

The solar chromosphere forms a crucial, yet complex and until recently poorly understood, interface between the solar photosphere and the heliosphere. Advances in high-resolution instrumentation, adaptive optics, image reconstruction techniques, and space-based observatories allow unprecedented high-resolution views of the finely structured and highly dynamic chromosphere.

In the upgraded telescope's new images, details as small as 50 kilometres (31 miles) across can be discerned amid the roiling activity on the surface of the Sun. "This was a very exciting, but also extremely challenging project," said physicist and GREGOR lead scientist Lucia Kleint of the Leibniz Institute for Solar Physics (KIS). "In only one year we completely redesigned the optics, mechanics, and electronics to achieve the best possible image quality."

## New High-Res Images of The Sun Show How Creepy Sunspots ...

When the sun flared dramatically in September 2017, causing geomagnetic storms and radio blackouts on Earth, a new NOAA solar telescope captured the drama from a different perspective. Now, NOAA has released these new images to the scientific community—images that scientists from NCEI and the Cooperative Institute for Research in Environmental Sciences (CIRES) have played a key role in capturing.

This paper presents closed-form analytic solutions to two illustrative problems in solar physics that have been considered not solvable in this way previously. Both the outflow speed and the mass loss rate of the solar wind of plasma particles ejected by the Sun are derived analytically for certain illustrative approximations. The calculated radial dependence of the flow speed applies to both ...
