~~Underlying any engineering application is the use of Numerical Methods. Numerical Methods is a manner in which 'discretization' of solutions can be achieved rather than analytical solutions (eg. integration, differentiation, ordinary differential equations and partial differential equations). Numerical Methods are also all the techniques encompassing iterative solutions, matrix problems, interpolation and curve fitting.~~

~~In engineering applications, numerical methods for studying dynamical systems are usually designed to give rapid and robust numerical solutions with small overall error. Traditional numerical schemes do not account explicitly for the qualitative features of the underlying physical system, however, incurring error that may suggest nonphysical behavior.~~
