White Paper June 2018 World Ocean Council

The ocean covers more than 70 % of the planet and is a vital support system for all life – but both coastal areas and the high seas are under threat. Currently a lack of information, especially regarding the understudied Areas Beyond National Jurisdiction (ABNJ), is hindering protection of these precious regions.

PROG – Partnership for Regional Ocean Governance

Ocean governance is the conduct of the policy, actions and affairs regarding the world's oceans. Within governance, it incorporates the influence of non-state actors, i.e. stakeholders, NGOs and so forth, therefore the state is not the only acting power in policy making. However, in terms of the ocean, this is a complex issue because it is a commons that is not ‘ owned ’ by

Ocean governance - Wikipedia

International ocean governance includes the processes, agreements, rules, institutions, etc. developed to organise the way in which humans use the ocean and its resources. Not including the territorial waters of countries, ocean governance relates to the High Seas and international seabed “ Area ” which support vital biological resources. However, because they are beyond the remit of any single government to protect, they are subject to overexploitation, pollution and habitat degradation ...

blocks needed for a framework for good ocean governance; a framework that will serve through the next decade and, and hopefully, well beyond the 2030 milestone of the UN Agenda for Sustainable

Development. In short, this book brings together the problems of the current world and sustainable solutions that are in the development process and will eventually materialize in the not so distant future.

Additionally, the book presents a trans-disciplinary analysis of integral sustainable maritime transportation solutions and crucial issues relevant to good ocean governance that have recently been discussed at different national, regional and international fora, highlighting ongoing work to develop and support governance systems that facilitate industry requirements, and meet the needs of coastal states and indigenous peoples, of researchers, of spatial planners, and of other sectors dependent on

Development Of The Oceans. The book will be of interest to researchers across many disciplines, especially those that are engaged in cross-sectoral research and developments in the maritime transport sector and across the wider maritime domain. To this end, the book covers areas including natural and social sciences, geographical studies, spatial planning, maritime security and gender studies, as they relate to transport and the wider maritime sector. In addition, the book explores frameworks for sustainable ocean governance being developed under the UN ' s Agenda for Sustainable Development to 2030. It will also look beyond the 2030 milestone under that Agenda, and will be of use to national and international policymakers and practitioners, government actors at the EU and other regional and national levels and to researchers of ocean governance, sustainability and management, and

The 1982 United Nations Convention on the Law of the Sea (UNCLOS) remains the cornerstone of global ocean governance. However, it lacks effective provisions or mechanisms to ensure that all ocean space and related problems are dealt with holistically. With seemingly no opportunity for revision due to the Conventions burdensome amendment provisions, complementary mechanisms dealing with such aspects of global ocean governance including maritime transport, fisheries, and marine environmental sustainability, have been developed under the aegis of the United Nations and other relevant international organizations. This approach is inherently fragmented and unable to achieve sustainable global ocean governance. In light of the Sustainable Development Goals (SDGs), particularly Goal 14, the IMLI

Treatise proposes a new paradigm on the basis of integrated and cross-sectoral approach in order to realise a more effective and sustainable governance regime for the oceans. This volume focuses on the role of UN as the central intergovernmental organization responsible for global ocean governance. It examines the ocean governance challenges and how the present legal, policy, and institutional frameworks of the UN have addressed these challenges. It identifies the strengths and weaknesses of UN legal structures and offers tangible proposals to realize the ambition of a global ocean governance system.

elaborate mechanisms they developed in order to achieve the desired objectives laid down in UNCLOS. From FAO to UNODC, the volume examines how they ensure sustainable development and how much coordination exists among them.

The trans-disciplinary thematic areas of oceans management and policy require stocktaking of the state of knowledge on ecosystem services being derived from coastal and marine areas. Recently adopted Sustainable Development Goals (SDGs) especially Goals 14 and 15 explicitly focus on this. This Handbook brings together a carefully chosen set of world-class contributions from ecology, economics, and other development science and attempts to provide policy relevant scientific information on ecosystem services from marine and coastal ecosystems, nuances of economic valuation, relevant legal and

of our knowledge of the future state of the oceans. The editors undertake the challenge of integrating diverse perspectives—from oceanography to anthropology—to exhibit the changes in ecological conditions and their socioeconomic implications. Each contributing author provides a novel perspective, with the book as a whole collating scholarly understandings of future oceans and coastal communities across the world. The diverse perspectives, syntheses and state-of-the-art natural and social sciences contributions are led by past and current research fellows and principal investigators of the Nereus Program network. This includes members at 17 leading research institutes, addressing themes such as oceanography, biodiversity, fisheries, mariculture production, economics, pollution, public health and marine policy. This book is a comprehensive resource for senior

Handbook on the Economics and Management of Sustainable Oceans brings together a carefully chosen collection of world-class contributions from ecology, economics and other development sciences. It provides policy-relevant scientific information on key topics such as ecosystem services from marine and coastal ecosystems and the nuances of economic valuation. Detailed chapters also consider relevant legal and sociological response policies for effective management of marine areas for enhanced human well-being. This comprehensive Handbook will be essential reading for advanced students and academics in economics, environment studies and resource management. The contributors also focus on the nexus of science-society and science-policy with the objective of educating decision-makers in governmental agencies, industry and civil society.

Download Ebook Ocean Governance Sustainable Development Of The Seas

This Special Issue is designed to discuss and examine relevant legal issues concerning ocean governance in the context of the United Nations Sustainable Development Goals (SDGs) for the long-lasting benefits of the international community. It will cover, inter alia, the safety of navigation and maritime security, the sustainable use of marine resources (living and non-living), marine environmental protection, climate change, and marine scientific research.

Oceans Governance in the Twenty-first Century analyses the development of national, regional and international initiatives and arrangements directed towards governance of the world's seas and oceans. The authors examine those factors that shape oceans governance, as well as the supports and constraints affecting policy development and implementation. In

Development Of The Seas
In addition, the book invaluable includes discussion of contemporary international and selected regional initiatives - including the development of a maritime policy by the EU. The processes and outcomes that have arisen in the development of oceans policy in Australia, Canada, New Zealand and the US are also summarised. This analysis centres on the key elements of institutional design, policy capacity, and the policy framework adopted as important supports to facilitate integrated oceans management. The book concludes that, despite increased attention to the oceans over the past two decades, major challenges remain, even where states have made concerted efforts to develop new approaches to ocean management. Marcus Haward and Joanna Vince's thorough study will appeal to researchers and academics at under and postgraduate levels working in the field of environmental management, as well as
