*Our Solar System Wikispaces - Aurora Winter Festival*

The point at which the Solar System ends and interstellar space begins is not precisely defined because its outer boundaries are shaped by two forces, the solar wind and the Sun's gravity. The limit of the solar wind's influence is roughly four times Pluto's distance from the Sun; this heliopause, the outer boundary of the heliosphere, is considered the beginning of the interstellar medium. [63]

ebook to have. In the free section of the Google eBookstore, you'll find a ton of free books from a variety of genres.

*Our Solar System Wikispaces - maestriasydiplomadostec.mx*

Our planetary system is named the "solar" system because our Sun is named Sol, after the Latin word for Sun, "solis," and anything related to the Sun we call "solar." Our planetary system is located in an outer spiral arm of the Milky Way galaxy. Our solar system consists of our star, the Sun, and everything bound to it by gravity – the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune, dwarf planets such as Pluto, dozens of moons and millions of asteroids, comets ...

*Overview | Our Solar System - NASA Solar System Exploration*

The Sun is a star. The Earth is one of eight planets that travel around the Sun. The planets are called Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. The solar system is also...
