CLICK HERE for the paperback version of this book. A straight-forward, detailed overview of pathophysiology, providing nursing students with clear and simple explanations of the basic principles that underpin health and illness, and the main causes of disease. The book uses person-centred nursing as its guiding principle (in-line with the new NMC standards) to encourage students to develop a more detailed understanding of specific disorders and learn how to apply the bioscience theory to nursing practice and patient care. Key features: Full-colour diagrams and figures: all content supported by colourful, reader-friendly illustrations. Person-centred bioscience: a fictional family woven through the book encourages students to think holistically about pathophysiology and consider the lived-experiences of different conditions and diseases. Online resources: access to online materials for lecturers and students, including multiple choice questions, videos, flashcards, lecturer test bank, an image bank and a media teaching guide.

This practical guide presents a concise approach to exploring endocrine pathophysiology through the physical exam, emphasizing common clinical signs in endocrinology that can be elicited through inspection, palpation, percussion or auscultation. The established and proposed mechanisms underlying these physical signs are highlighted, allowing students, residents and trainees to better appreciate endocrine pathophysiology at the bedside. The text is organized sensibly to facilitate quick and efficient review by medical trainees. Major diseases in endocrinology are grouped by organ systems - pituitary, thyroid, adrenal, and so on. Specific physical examination findings in each primary endocrine disease are reviewed and grouped under the categories of clinical features and pathophysiology, followed by related clinical and pathophysiology pearls. A brief description of the clinical finding is followed by a summary of the pathophysiologic mechanisms underlying the stated clinical finding. Relevant normal physiology and pathophysiology are reviewed where applicable, to facilitate learning. There are numerous texts on the pathophysiologic basis of diagnostic and laboratory findings in endocrinology. There is, however, no dedicated text to address questions that might be asked by trainees. Endocrine Pathophysiology satisfies this need in the literature.

A concise, easy-to-understand introduction to the fundamentals, Pathophysiology for the Health Professions, 4th Edition helps you learn to identify disease processes and disorders. Authors Barbara Gould and Ruthanna Dyer continue the tradition of a text known for its readability and vivid, full-color illustrations, updated with the latest research and clinical advances. Unique Challenge, Think About, and Emergency Treatment features help in applying the material to real-life situations. No matter which area in the healthcare field you may enter, this book provides essential preparation for conditions encountered in clinical practice. Concise and readable approach includes the information students need without overwhelming them, even if they have a limited scientific background. Unique Challenge feature asks "What can go wrong with this structure or system?" as a way to help students facilitate progress by using previously learned knowledge. Unique Think About boxes help with self-evaluation, test preparation, and review. Unique Emergency Treatment boxes list basic emergency measures; these can be modified to fit specific professions, established protocols, or practice settings. Research boxes discuss new developments, problem areas of pathophysiology, and complications associated with research. Warning Signs boxes summarize conditions that may develop in patients. Diagnostic tests and treatments are included for each of the major disorders. Case studies in each chapter provide a basis for discussion or can be used as an assignment. Study questions offer a self-assessment on the material in each chapter. Ready References in the appendix provide a quick lookup for anatomic terms, conversion tables, abbreviations and acronyms, diagnostic studies and tests, and more. A companion Evolve website includes web links, learning activities, content updates, and more. New content on the causes and trends related to disease, new drugs, technology, and treatment. Coverage of obesity and its complications, including an in-depth discussion of metabolic syndrome. Multiple disorder syndromes in the aged client. DNA, genetics and the Human Genome Project with current research on protein pathways in health (proteomics) and the implications for drug treatment and disease causation. Coverage of autism. Updated content on the H1N1 virus and communicable diseases; HIV, cancer causation, and immunology; and substance abuse to reflect common practices in the use of illicit (street) drugs as well as abuse of prescription medications. Case studies revised to emphasize chronic diseases, prevention, and acute care, and to apply to a wider range of health professions. Appendices reorganized for improved reference and lookup.

Expanded, updated, and now in full color throughout, this Fourth Edition presents vital pathophysiology information in an easy-to-understand, easy-to-remember, entertaining, and practical manner. Chapters cover cancer, infection, immune disorders, genetics, blood, and disorders of each body system, highlighting pathophysiologic processes, signs and symptoms, diagnostic test findings, and current treatments. Illustrations, memory joggers, and other special features help readers understand and remember key points. This edition's expanded cancer chapter covers more types of cancer. The Practice Makes Perfect self-test includes more NCLEX®-style questions, with rationales for correct and incorrect answers. A companion website on thePoint will offer additional information, illustrations, memory joggers, and study cards.
