Geochemistry—American Association of Petroleum Geologists

Pyrobitumen is a type of solid, amorphous organic matter. Pyrobitumen is mostly insoluble in carbon disulfide and other organic solvents as a result of molecular cross-linking, which renders previously soluble organic matter (i.e., bitumen) insoluble. Not all solid bitumens are pyrobitumens, in that some solid bitumens (e.g., gilsonite) are soluble in common organic solvents, including CS

Petrology, Geochemistry, and Economic Geology. Our faculty combine field and experimental work, and theory to study a wide range of planetary processes including the physicochemical causes and timing of volcanic eruptions, the nature of deformation during regional metamorphism, the evolution of base and precious metal deposits, the connection between the mantle and the volcanic arc in subduction zones, mantle mineralogy, and the dynamics of core-mantle interaction.
