Today's stringent design requirements and difficult-to-machine materials such as tough super alloys, ceramics, and composites, have made traditional machining processes costly and obsolete. As a result, manufacturers and machine design engineers are turning to advance machining processes. These machining processes utilizes electrical, chemical, and optimal sources of energy to bind, form and cut materials. El-Hofy rigorously explains how each of these advanced machining process work, their machining system components, process variables and industrial applications, making this book the perfect guide for anyone designing, researching or converting to a more advance machining process.

Another powerful story in the Logan Family Saga and companion to Mildred D. Taylor's Newbery Award-winning *Roll of Thunder, Hear My Cry*. For David Logan, a time of distress means taking the higher road. During a drought, the Logan family shares their well water with their neighbors, black and white alike. But David's brother Hammer finds it hard to share with Charlie Simms, who torments them because they

are black. Hammer's pride and Charlie's meanness are a dangerous combination, and tensions between the boys build and build—until they explode. * "A compelling novel about prejudice and the saving power of human dignity."—School Library Journal, starred review
