information sciences, the book builds a coherent picture of the relationships between the brain and the mind. In a lively, down-to-earth, yet scientifically sound presentation, the book introduces a few elementary information-handling mechanisms, and shows how the brain builds with them a variety of mental activities including learning, thinking, understanding, perceiving, sexual-drives, and more. Knowing the brain's basic mechanisms could help us improve ourselves by better understanding our own mind; how it does what it does, what we should accept, and how to change what could be changed.

there has been no single volume in English that tells the history of the events--from the Ottoman Empire to the mid-twentieth century--that shaped modern Palestine. The first book of its kind, *A History of Palestine* offers a richly detailed interpretation of this critical region's evolution. Starting with the prebiblical and biblical roots of Palestine, noted historian Gudrun Krämer examines the meanings ascribed to the land in the Jewish, Christian, and Muslim traditions. Paying special attention to social and economic factors, she examines the gradual transformation of Palestine, following the history of the region through the Egyptian occupation of the mid-nineteenth century, the Ottoman reform era, and the British Mandate up to the founding of Israel in 1948. Focusing on the interactions of Arabs and Jews, *A History of Palestine* tells

The book treats the brain as an information handling system. It introduces the basic mechanisms that the brain uses to acquire new information, organize it in information structures, retrieve it, implement it in physical and mental activities, and create new information from existing one. The book brings examples from various situations to illustrate how combinations of those basic mechanisms end up in observed human behavior. Included in the examples are: The development of sexual drives that shape sexual arousal habits and sexual orientation; learning mechanisms, understanding and perception, intelligence, and more. Recent scientific discoveries are introduced in down-to-earth, entertaining, yet accurate presentation.
