We need to convert grams to kilograms and cubic centimeters to cubic meters. The conversion factors we need are 1 kg = 10 3 g and 1 cm = 10 ?2 m. However, we are dealing with cubic centimeters (cm 3 = cm x cm x cm), so we have to use the second conversion factor three times (that is, we need to cube it). The idea is still to multiply by the conversion factors in such a way that they cancel the units we want to get rid of and introduce the units we want to keep.
