The first detailed English socio-political history of Stalin's industrial revolution, during the initial Five-Year plan, depicts a period of sacrifice for the entire nation.

A study which challenges the dominant understanding of Singapore as a case where "correct" policies have made rapid industrialization possible and which raises questions about the possibility and appropriateness of its emulation.

The British Industrial Revolution has long been seen as the spark for modern, global industrialization and sustained economic growth. Indeed the origins of economic history, as a discipline, lie in 19th-century European and North American attempts to understand the foundation of this process. In this book, William J. Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures. In particular, he explores the role of State regulation and protectionism in nurturing Britain's negligible early manufacturing base. Taking a long view, from the mid 17th century through to the 19th century, the analysis weaves together a vast range of factors to provide one of the fullest analyses of the industrial revolution, and one that places it firmly within a global context, showing that the Industrial Revolution was merely a short moment within a much larger and longer global trajectory. This book is an important intervention in the debates surrounding modern industrial history will be essential reading for anyone interested in global and comparative economic history and the history of globalization.

This text is a wide-ranging survey of the principal economic and social aspects of the first Industrial Revolution.

This ready-reference encyclopedia offers in-depth coverage of the economic, political, and social developments of the Industrial Revolution in the United States from 1750 to 1920. More than 200 substantial entries cover key individuals, significant technologies, inventions, court cases, companies, political institutions, economic events, and legislation. Highlights of the work include numerous entries on developments in water and rail transportation, agriculture, manufacturing, mass production, the labor movement, big government, and the key inventions that changed the American economy. More than 50 historical illustrations and photos enliven the text.

The industrial revolution was the single most important development in human history over the past three centuries, and it continues to shape the contemporary world. With new methods and organizations for producing goods, industrialization altered where people live, how they play, and even how they define political issues. By exploring the ways the industrial revolution reshaped world history, this book offers a unique look into the international factors that started the industrial revolution and its global spread and impact. In the fourth edition, noted historian Peter N. Stearns continues his global analysis of the industrial revolution with new discussions of industrialization outside of the West, including the study of India, the Middle East, and China. In addition, an expanded conclusion contains an examination of the changing contexts of industrialization. The Industrial Revolution in World History is essential for students of world history and economics, as well as for those seeking to know more about the global implications of what is arguably the defining socioeconomic event of modern times.

This book offers a critical reflection on the meaning and expected impact of the fourth industrial revolution, and its implications for industrial policy. Industrial revolutions are considered not only in terms of technological progress, but also in the context of the changing relationship between market and production dynamics, and the social and political conditions enabling the development of new technologies. Industrial Policy for the Manufacturing Revolution aims to increase our capacity to anticipate and adapt to the forthcoming structural changes. A concrete illustration of this industrial policy is provided through an experience of its implementation at regional level.

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and

discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future--one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
