[34m7em7kem46]

“A population graph shows what happens to the population of a species over time. The x-axis shows. passage of time; the farther you go to the right, the more time elapses. The y-axis shows population size; as you go up the axis, the population increases. The scales for both population and time are determined by the data.” 2.

## *Pop Ecology Files - Population Education*

In an ecosystem, the population of primary and secondary groups rise or fall in similar patterns. This occurs because changes in one population directly affect those of the other population. Directions: The following graph shows the moose and wolf populations in one state from the year 1976 to 1995. Study the graph and then answer the questions ...
