This decision process is important for software rollback, but is too complex for a completely hardware solution. Hardware-based rollback techniques fall in one of two categories: (1) full checkpointing and (2) incremental checkpointing (Alewine et al., 1992). Full checkpointing maintains snapshots of the entire state of the system (essentially all register, cache, and memory contents) at the checkpoints, whereas incremental checkpointing maintains only the changes to the state from the ...
