Peanut protein and soya protein are known to cause severe and potentially life-threatening type 1 allergic reactions. In the UK about one in 100 people have an allergy to peanuts, and this number is increasing. Patients with known allergy to peanut protein carry an enhanced risk of severe reactions to soya preparations.

UKMI: Q&A xx — SPS

The peanut patch is a different approach in that the application of the allergen dose is via the skin. There are immune cells in the skin and we believe that by exposing those skin allergy cells, we can desensitize them and make the body more accepting to peanut.

New treatments for peanut allergy? — ACAAI Public Website

A/Prof Loh recommends outsourcing feeding peanut to your baby if you ’ re allergic, given that little ones aren ’ t great at wiping their mouths and hands, and drool often. He suggests asking your partner or a friend to give your baby peanut butter outside in the garden (once you ’ ve established that they ’ re not allergic).

Q&A: If I have a peanut allergy, will my baby have it too?

Some peanut allergic individuals are also allergic to other legumes (including soya) (2) and fatalities have been reported in some patients with a known severe food allergy to peanut after ingesting soya-containing foods (3). There is an expectation that similar proteins across the legume family will cause reactions in some individuals (1).
