Civil Engineer's Reference Book, Fourth Edition provides civil engineers with reports on design and construction practices in the UK and overseas. It gives a concise presentation of theory and practice in the many branches of a civil engineer's profession and it enables them to study a subject in greater depth. The book discusses some improvements in earlier practices, for example in surveying, geotechnics, water management, project management, underwater working, and the control and use of materials. Other changes covered are from the evolving needs of clients for almost all forms of construction, maintenance and repair. Another major change is the introduction of new national and Euro-codes based on limit state design, covering most aspects of structural engineering. The fourth edition incorporates these advances and, at the same time, gives greater prominence to the special problems relating to work overseas, with differing client requirements and climatic conditions. Chapters 1 to 10 provide engineers, at all levels of development, with 'lecture notes' on the basic theories of civil engineering. Chapters 11 to 44 cover the practice of design and construction in many of the fields of civil engineering. Civil engineers, architects, lawyers, mechanical engineers, insurers, clients, and students of civil engineering will find benefit in the use of this text.

The U.S. Department of Defense (DoD) faces short-term and long-term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing missions. The DoD has established standards for aptitudes/abilities, medical conditions, and physical fitness to be used in selecting recruits who are most likely to succeed in their jobs and complete the first term of service (generally 36 months). In 1999, the Committee on the Youth Population and Military Recruitment was established by the National Research Council (NRC) in response to a request from the DoD. One focus of the committee's work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs. When the committee began its work in 1999, the Army, the Navy, and the Air Force had recently experienced recruiting shortfalls. By the early 2000s, all the Services were meeting their goals; however, in the first half of calendar year 2005, both the Army and the Marine Corps experienced recruiting difficulties and, in some months, shortfalls. When recruiting goals are not being met, scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. *Assessing Fitness for Military Enlistment* examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service.

From September 2011 to September 2012, Ambassador Nasser Abdulaziz Al-Nasser of Qatar presided over the 66th session of the “ world ’ s parliament ” – the United Nations General Assembly. It was a critical moment in international affairs as the UN responded to a range of global challenges, from the world financial crisis to the Arab Spring. In *A Year at the Helm of the General Assembly*, Al-Nasser presents a high-level look inside the organization, assessing its strengths and weaknesses, its successes and struggles. He recounts dramatic moments, such as replacing the Libyan delegation, and a tireless schedule of overseas travel, including joint visits with the Secretary-General to Libya and Somalia. His work takes him from major international summits such as the Conference on Sustainable Development in Rio de Janeiro, Brazil (Rio+20) to the European Parliament, which he was the first General Assembly President to address, to academic institutions from Oxford to Moscow to Morocco. Al-Nasser structures the book as he did his 66th session, around four main themes or “ pillars: ” mediation, UN reform, natural disaster prevention and response, and sustainable development. He offers a wide range of recommendations to intergovernmental institutions, to states, to the public sector, and to individuals. Al-Nasser was determined to leave behind a General Assembly that the people of the world could look up to and depend on. This volume is a testament to all that he accomplished in that regard, and a unique resource for those interested in knowing more about the world ’ s most representative body at a crucial moment in history.
