improves the physical properties and have potential applications in optical devices, opto-electronics, flat panel display and biosensors. RE $3+$ ions can be employed as luminescent material in extensive applications due to their $4f$ electronic configuration.

Novel rare earth Dy doping impact on physical properties ...

Rare earth (RE) ions ($Tb\ 3+$, $Dy\ 3+$, and $Er\ 3+$) are incorporated into ZnO nanostructures by a facile isocrystalline core/shell (ICS) protocol. Characteristic photoluminescence of rare earth ions has been observed for these doped nanocrystals.

(PDF) Rare Earth-Doped Zinc Oxide Nanostructures: A Review

1. Introduction. The rare-earth doped functional inorganic nanoparticles, which generally consist of inorganic crystalline hosts and rare-earth ions doped in the lattice of the nanocrystals, have found many applications in biomedical and energy related areas [, , ,]. The unique light converting properties of doped rare-earth ions enable the nanoparticles to be nanophosphors for optical ...

3 Rare Earth Elements in ZnO

Nanowires. Rare earth (or lanthanides, RE) labels the elements with partly filled 4f shells. Their electronic structure is [Xe]6s² 5d¹ 4fⁿ.

Typically, in solids the elements occur dominantly in the triply ionized state ([Xe]4fⁿ) with n = 1 for Ce 3+ to n = 13 for Yb 3+ releasing the two 6s and one 5d electrons.

On the Incorporation of Trivalent Rare Earth Ions in II-VI ...

For advancement in future spintronics, the diluted magnetic semiconductors (DMSs) might be understood for their origin of ferromagnetic aptness. It not much clear to the ferromagnetism in DMS, that is intrinsic or via dopant clustering formation. For this, we have included a review study for the doping of transition metal and rare earth ions in ZnO. It is realized that the antiferromagnetic ...
