What Can (and Should) We Measure? Temperature: Ideal indoor temperatures range from 73° F to 79° F in the summer, and 68° F to 75° F in the winter. [1] Humidity: High humidity levels in the home can lead to mold growth. Ideally, indoor humidity should be in the range of 30-60 percent. [2]

Indoor Air Quality – Measuring My Indoor Environment, Part 1

The operating environments are identified by appropriate subsets consisting of indoor office environments, outdoor to indoor and pedestrian environments, and vehicular (moving vehicle) environments. For narrowband technologies (such as FDMA and TDMA), delay spread is characterized by its rms value alone. However, for wide band technologies (such as CDMA), the strength and relative time delay ...

Operating Environment - an overview | ScienceDirect Topics

Relative humidity between 40% and 70% does not have a major impact on thermal comfort. In workplaces which are not air conditioned, or where the weather conditions outdoors may influence the indoor...

HSE - Thermal comfort: The six basic factors

According EN 12464 Light and lighting - Lighting of workplaces -Indoor work places, the minimum illuminance is 50 lx for walls and 30 lx for ceilings. Earlier it was common with light levels in the range 100 - 300 lux for normal activities. Today the light level is more common in the range 500 - 1000 lux - depending on activity.
