Corporate Communication, CRM, Market Research, Social Media, University of California, Santa Barbara, language: English, abstract: This research paper deals with Samsung Electronics: with its history and the competitive advantage. The economy and the culture in South Korea are also addressed. The last chapter is about Samsung's global marketing strategy, especially market entries and the marketing mix. International trade is anything but a novelty, it has begun before Christ, but the importance of trade has sharply increased since then. Nowadays we talk about global markets and it is necessary

to be aware of the importance of global marketing, otherwise companies risk losing domestic customers to competitors with cheaper or better products. The Fortune Magazine scrutinizes the revenues of large global players every year and publishes a list of the “Global 500” that ranks the global companies by their sales strength. Samsung Electronics was number thirteen in that list in the year 2015. Thus it is worth looking at this great company and the corresponding environment more closely. The purpose of this study is to find out how Samsung shapes its global marketing strategy.

As Samsung is a gigantic conglomerate with lots of subsidiaries I will restrict this thesis to Samsung Electronics which operates in the electronics industry. As Samsung Electronics is still a huge company acting in many business areas with plenty of products on several markets I will limit this research again to the business sector of smartphones.

An insider's account of the management principles driving one of the world's most innovative companies Twenty years ago, few people would have predicted that Samsung could transform itself from a low-cost original equipment manufacturer to a world leader in R&D, marketing, and design, with a brand more valuable than Pepsi, Nike, or

Based on ten years of research inside Samsung and interviews with 80 of Samsung's top executives, *The Samsung Way* tells the compelling story of how Samsung has grafted Western business practices onto its essentially Japanese system, combining its low-cost manufacturing prowess with an ability to bring high-quality, high-margin branded products swiftly to market. The world economy fell into a global financial crisis in 2008/9 and is still jittered by its aftershocks. Like other financial crises happened in the world economy, it came as a surprise. In historical

perspective, financial crises should be understood as a natural fact of life in the world economy and a more pertinent question that should be posed would be why people so easily forget and do not learn from the historical experience. This book deals with the question in two ways. First, it investigates the frame of mind that distances people from the reality of life. At the heart of it, it argues that there are wrong perceptions on the working of the world economy, in particular, the international financial market. It summarizes them as 'the five conventional wisdoms' in the

international financial market and, by critically examining them, it draws on 'the five financial theorems', which would provide intellectual pillars for a more realistic understanding of the global financial market. Second, the book examines in detail the case of an emerging market economy that fell into a financial crisis twice in the recent decade. South Korea provides us with an interesting case of emerging market financial crises that came as 'surprises': it faced a financial crisis in 1997/98 after it had been acclaimed as one of 'East Asian miracle economies' and it was again befallen to a

crisis during the global financial crisis in 2008/2009 after it was widely regarded as a country that had recovered from the crisis with one of the most successful implementations of the IMF-sponsored reforms. The book attempts to provide the readers with a realistic understanding of emerging market financial crises by interpreting the recent global financial crisis and the Korean crises with some general concepts manifested in 'the five financial theorems'. It also tries to draw more general implications for policy management of emerging market economies.

Our genome may determine our eye color and even aspects of our character. But our friendships, failures, and passions also shape who we are. The question is: How? Sebastian Seung is at the forefront of a revolution in neuroscience. He believes that our identity lies not in our genes, but in the connections between our brain cells—our particular wiring. Seung and a dedicated group of researchers are leading the effort
