Rhetoric often influences our perception of the way we view reality. Our views on what we see as a problem and how we choose to go about acting about it are often influenced by the use of rhetoric. Reality is raw and unedited, a reflection of the mess that we call existence. Rhetoric is select aspects of it, which are elevated in tone and quality if not totally because they are given linguistic makeovers – usually just because someone has a fleeting idea that any topic deserves more of our focus/attention.

This use of rhetoric is not opposed to reality and may (often) be used to support that which is true. However, the definition that I propose as a possibility is the use of rhetoric as ‘speech or discourse that pretends to significance but lacks true meaning’. We’ve noted that the phrase ‘by making abortion illegal, you don’t prevent abortion; you prevent safe abortion’ is fashioned to lead the hearer to a very specific conclusion; there is nothing wrong with that.

Abstract It is common in discussions about human resource management (HRM) to distinguish between “rhetoric” and what is regarded as a clearly separate “reality”. This is naïve in that it fails to recognize the way those researching the human aspects of management and those practically involved in it influence each other.

How can the education of our nation's children be improved? Vouchers and charter schools aim to improve education by providing families with more choice in the schooling of their children and by decentralizing the provision of educational services. While supporters argue that school choice is essential to rescue children from failing schools, opponents claim that it may destroy America's public education system. The authors undertake an exhaustive and critical view of the evidence on vouchers and charter schools. The book is a useful, unbiased primer for all those interested in this controversial topic.

Education vouchers and charter schools are two of the most prominent and far-reaching forms of family choice policies currently in evidence in the nation's elementary and secondary schools. As such, they present important challenges to the traditional provision of public education in schools that are created, governed, funded, and operated by state and local authorities. This book reviews the theoretical foundations for vouchers and charter schools and the empirical evidence of their effectiveness as set forth in hundreds of recent reports and studies. The literature analyzed includes studies that directly examine voucher and charter schools, in the United States and abroad, and, where relevant, comparisons between existing public and private schools. This book also examines the ways in which multiple dimensions of policy design such as targeting, funding levels and limitations, admissions policies, academic standards and assessments, and accountability-will determine the nature and extent of any specific program's impact. The findings will be of interest to policymakers, researchers, and educators at every level of the education system who must assess numerous proposals for vouchers, charter schools, and other forms of family choice in education.

Are America's schools broken? Education Hell: Rhetoric vs. Reality seeks to address misconceptions about America's schools by taking on the credo 'what can be measured matters.' To the contrary, Dr. Bracey makes a persuasive case that much of what matters cannot be assessed on a multiple choice test. The challenge for educators is to deal effectively with an incomplete accountability system-while creating a broader understanding of successful schools and teachers. School leaders must work to define, maintain, and increase essential skills that may not be measured in today's accountability plans.

In the first paragraphs of this volume, the author identifies an "authenticity paradox": that the purported real-worldness of a learning environment, technique, or task is so rhetorically potent that educators frequently call attention to it in pedagogical conversations to legitimize their undertakings, while at the same time, terms such as "real-world" and "authentic" do not require (and even resist) precise delineation. Using the language of authenticity as a keyhole through which to view contemporary educational theory, Petraglia draws on theories of cognition, education, and knowledge to articulate the interdisciplinarity of "constructivism" and to expose the unsettling combination of constructivism's social scientific and epistemological commitments. He argues that a full-bodied embrace of constructivist theory requires that educators forgo "knowledge as we know it" and recommends a "rhetorical" approach to constructivist instruction that recognizes the cultural, social, and behavioral practices which play an enormous role in defining learners' "real worlds." Applying this critique to the field of educational technology, the author does not merely lament constructivist theory's current shortcomings, but offers a means by which these shortcomings can be engaged and, perhaps, overcome.

Intended for teachers of college composition, this history of major and minor developments in the teaching of writing in twentieth-century American colleges employs a taxonomy of theories based on the three epistemological categories (objective, subjective, and transactional) dominating rhetorical theory and practice. The first section of the book provides an overview of the three theories, specifically their assumptions and rhetorics. The main chapters cover the following topics: (1) the nineteenth-century background, on the formation of the English department and the subsequent relationship of rhetoric and poetic; (2) the growth of the discipline (1900-1920), including the formation of the National Council of Teachers of English, the appearance of the major schools of rhetoric, the efficiency movement, graduate education in rhetoric, undergraduate courses and the Great War; (3) the influence of progressive education (1920-1940), including the writing program and current-traditional rhetoric, liberal culture, and expressionistic and social rhetoric; (4) the communication emphasis (1940-1960), including the communications course, the founding of the Conference on College Composition and Communication, literature and composition, linguistics and composition, and the revival of rhetoric; and (5) the renaissance of rhetoric and major rhetorical approaches (1960-1975), including contemporary theories based on the three epistemic categories. A final chapter briefly surveys developments through 1987. (JG)

Reality and Rhetoric is the culmination of P. T. Bauer's observations and reflections on Third World economies over a period of thirty years. He critically examines the central issues of market versus centrally planned economies, industrial development, official direct and multinational resource transfers to the Third World, immigration policy in the Third World, and economic methodology. In addition, he has written a fascinating account of recent papal doctrine on income inequality and redistribution in the Third World. The major themes that emerge are the importance of non-economic variables, particularly people's aptitudes and mores, to economic growth; the unfortunate results of some current methods of economics; the subtle but important effects of the exchange economy on development; and the politicization of economic life in the Third World. As in Bauer's previous writings, this book is marked by elegant prose, apt examples, a broad economic-historical perspective, and the masterful use of informal reasoning.

Stemming from four years of ethnographic research, media analysis of over 750 national news articles published in the 2010s, and decades of the author's professional and personal immersion in the Rio Grande Valley of south Texas, Rhetoric and Reality illuminates a place at the heart of our national conversation: the U.S.-Mexico border. K. Jill Fleuriet contrasts the rhetoric of national political and media discourse with that of local border leaders in economics, health care, politics, education, law enforcement, philanthropy, and activism. As she deconstructs the common narrative of a border in need of external intervention to control corruption, poverty, sickness, and violence, Fleuriet engagingly illustrates the range of regional organizing, local development strategies, and community responses in the borderlands that ultimately situate the Rio Grande Valley as the "true North" of the U.S. national compass-where the Valley goes, the rest of the country soon will follow. Rhetoric and Reality asks us to question our own assumptions, especially about those areas that drive national decisions about resource allocation, economic development and national security. "Rhetoric and Reality is an important ethnographic study of the deeply misunderstood, increasingly vilified, Rio Grande Valley located on the Texas-Mexico border. Fleuriet presents a balanced counter-narrative that that shows the region as one of growth, innovation, complexity, and rich with meaning. Rhetoric and Reality is an excellent example of place-based, reflexive scholarship appropriate for use in courses on border theory, applied anthropology, and research methods. Written clearly and crisply with a wide readership in mind, Rhetoric and Reality is mandatory reading for those wanting to better understand the US-Mexico border region and the people who live there." --Margaret A. Graham, Professor and Chair, The University of Texas Rio Grande Valley, USA "This is an important book, as it describes life in the Rio Grande Valley rather than 'on the border.' The notion of 'the border' as an open range in need of external help is challenged, as the author illustrates the wide range of leadership and programmatic change occurring in the Rio Grande Valley." --Roberto R. Alvarez, Professor Emeritus of Ethnic Studies, University of California, San Diego, USA

Who are the real voters? Drawing on authoritative nationwide surveys and a wide range of quips and quotes, the author outlines the profiles of the average Republican and Democrat, and details their lifestyles, ethics, intelligence, and achievements in a multitude of charts and statistics. A recognized whistleblower who identified \$2BN in false Social Security claims, the author pokes fun while poking holes in our prejudices about both national parties. This work, he says, is OC an informative, fair, and constructive book that can broaden your understanding of Democrats and Republicans. A major revision of our understanding of long-range bombing, this book examines how Anglo-American ideas about "strategic" bombing were formed and implemented. It argues that ideas about bombing civilian targets rested on--and gained validity from--widespread but substantially erroneous assumptions about the nature of modern industrial societies and their vulnerability to aerial bombardment. These assumptions were derived from the social and political context of the day and were maintained largely through cognitive error and bias. Tami Davis Biddle explains how air theorists, and those influenced by them, came to believe that strategic bombing would be an especially effective coercive tool and how they responded when their assumptions were challenged. Biddle analyzes how a particular interpretation of the World War I experience, together with airmen's organizational interests, shaped interwar debates about strategic bombing and preserved conceptions of its potentially revolutionary character. This flawed interpretation as well as a failure to anticipate implementation problems were revealed as World War II commenced. By then, the British and Americans had invested heavily in strategic bombing. They saw little choice but to try to solve the problems in real time and make long-range bombing as effective as possible. Combining narrative with analysis, this book presents the first-ever comparative history of British and American strategic bombing from its origins through 1945. In examining the ideas and rhetoric on which strategic bombing depended, it offers critical insights into the validity and robustness of those ideas--not only as they applied to World War II but as they apply to contemporary warfare.

This book compares and contrasts how different firms approach marketing within the same country. It concerns issues revolving around marketing as a form of rhetoric and marketing as a living reality for firms who practice it and contains cutting edge thinking from expert commentators on the marketing scene worldwide. It uses 16 case study examples of marketing practice in eight countries and shows whether marketing allegiance is openly proclaimed but in practice merely a rhetorical device or whether it is deeply embedded in organizational culture.
