Ernie O'Malley was a leader in the 1916-1923 Revolution in Ireland, and a contemporary of Michael Collins and Eamon de Valera. This biography draws heavily on previously unseen archival material, and should be of interest to those studying modern Irish politics and the history of the IRA.

The story of the former Polish-Jewish community (shtetl) of Luboml, Wo\u017cy\u0142, Poland. Its Jewish population of some 4,000, dating back to the 14th century, was exterminated by the occupying German forces and local collaborators in October, 1942. Luboml was formerly known as Lyuboml, Volhynia, Russia and later Lyuboml, Volyns'ka, Ukraine. It was also know by its Yiddish name: Libivne.

A common characteristic of water demand in urban areas worldwide is its inexorable rise over many years; continued growth is projected over coming decades. The chief influencing factors are population growth and migration, together with changes in lifestyle, demographic structure and the possible effects of climate change (the detailed implications of climate change are not yet clear, and anyway will depend on global location, but must at least increase the uncertainty in security of supply). This is compounded by rapid development, creeping urbanization and, in some places, rising standards of living. Meeting this increasing demand from existing resources is self-evidently an uphill struggle, particularly in water stressed/scarce regions in the developed and developing world alike. There are typically two potential responses: either "supply-side" (meeting demand with new resources) or "demand-side" (managing consumptive demand itself to postpone or avoid the need to develop new resources). There is considerable pressure from the general public, regulatory agencies, and some governments to minimise the impacts of new supply projects (e.g. building new reservoirs or inter-regional transfer schemes), implying the emphasis should be shifted towards managing water demand by best utilising the water that is already available. Water Demand Management has been prepared by the academic, government and industry network WATERSAVE. The concept of the book is to assemble a comprehensive picture of demand management topics ranging from technical to social and legal aspects, through expert critical literature reviews. The depth and breadth of coverage is a unique contribution to the field and the book will be an invaluable information source for practitioners and researchers, including water utility engineers/planners, environmental regulators, equipment and service providers, and postgraduates. Contents Water consumption trends and demand forecasting techniques The technology, design and utility of rainwater catchment systems Understanding greywater treatment Water conservation products Water conservation and sewerage systems An introduction to life cycle and rebound effects in water systems Developing a strategy for managing losses in water distribution networks Demand management in developing countries Drivers and barriers for water conservation and reuse in the UK The economics of water demand management Legislation and regulation mandtating and influencing the efficient use of water in England and Wales Consumer reactions to water conservation policy instruments Decision support tools for water demand management

The Detox Miracle Sourcebook shows you how to cleanse your body of the poisons that are destroying your health, and start the process of complete cellular regeneration that leads to true healing. Based on 30 years of clinical experience, treating thousands of people with conditions ranging from OVERWEIGHT to CANCER, Dr. Robert Morse reveals his ultimate healing system - the Detox Miracle! • Covers the A-Z of Detoxification, including: Why do it? When to do it? What to expect? How it works, and how long it takes. • Explains the uses of specific raw foods and herbs for cleansing and healing every organ, system, and unbalanced condition in the body. • Details the interface of body, mind and soul in the achievement of lifelong health. • Presents the Detox Miracle Diet, and how to adapt it for life. • Includes dozens of easy-to-use References: lists of herbs, herbal formulas, properties of foods, minerals, phytochemicals, and cell salts, etc.; along with raw food recipes; a detailed Index; broad-based Resource Guide; and extensive Glossary and Bibliography. ONE THING I KNOW about Dr. Morse is that he has walked his talk. This amazing book leads you step-by-step through every facet of detoxification and vitality building. A treasure chest of information for the beginner and the advanced health-seeker alike. -David Wolfe, CEO:www.rawfood.com, author of The Sunfood Diet Success System and Eating for Beauty. EXTREMELY PRACTICAL; a most informative tool. Helping others to help themselves through education provides a lasting impression upon their overall health. What better way to serve the Lord than to educate the masses. -Gary L. Axley, M.M.D., D.O., president of Southern College of Naturopathic Medicine. CAREFULLY RESEARCHED. A "must" for the professional practitioner as well as for the layperson. Destined to become a classic. -Donald Veaser Bosen, D.C., Ph.D. I HAVE USED DR.MORSE'S program and his herbs with many cases over the years, and with great success. This method is the real healing method for today and the future. -William Christner, N.D., C.M. THE STUDY OF THIS BOOK will be a spiritual, mental, and physical blessing for complete body health. Thank you, Dr. Morse, for a wonderful book! -Dr. Ed David, N.D., Health Education Center. Natural Health \$29.95 HOHM PRESS The Detox Miracle Sourcebook MORSE

The Ancient Hidden Art of Alchemie, Containing the right and perfect means To make the Philosophers Stone Aurum Potabile, with other Excellent Experiments, Divided into Twelve Gates. Sir George Ripley (c. 1415-1490) was an English Augustinian canon, author, and alchemist.

An essential reference for any laboratory working in the analytical fluorescence glucose sensing field. The increasing importance of these techniques is typified in one emerging area by developing non-invasive and continuous approaches for physiological glucose monitoring. This volume incorporates analytical fluorescence-based glucose sensing reviews, specialized enough to be attractive to professional researchers, yet appealing to a wider audience of scientists in related disciplines of fluorescence.

The combustion of fossil fuels remains a key technology for the foreseeable future. It is therefore important that we understand the mechanisms of combustion and, in particular, the role of turbulence within this process. Combustion always takes place within a turbulent flow field for two reasons: turbulence increases the mixing process and enhances combustion, but at the same time combustion releases heat which generates flow instability through buoyancy, thus enhancing the transition to turbulence. The four chapters of this book present a thorough introduction to the field of turbulent combustion. After an overview of modeling approaches, the three remaining chapters consider the three distinct cases of premixed, non-premixed, and partially premixed combustion, respectively. This book will be of value to researchers and students of engineering and applied mathematics by demonstrating the current theories of turbulent combustion within a unified presentation of the field.
