Introducing trifluoromethyl groups is a common strategy to improve the properties of biologically active compounds. However, N-trifluoromethyl moieties on amines and azoles are very rarely used. To evaluate their suitability in drug design, we synthesized a series of N-trifluoromethyl amines and azoles, determined their stability in aqueous media, and investigated their properties. We show ...

As shown in Table 2, simple alkyl groups such as the N-methyl and N-ethyl (compounds 2a and 2b) do not result in a significant change in the cell growth inhibition compared to 1h.This observation also suggests that the N–H group is not a necessary structure unit for the activity of 1h.Recognizing that the N-methyl and N-ethyl groups maybe too small to cause a significant effect in potency, a ...
