This new handbook contains the most comprehensive account of sample surveys theory and practice to date. It is a second volume on sample surveys, with the goal of updating and extending the sampling volume published as volume 6

of the Handbook of
Statistics in 1988. The
present handbook is
divided into two
volumes (29A and 29B),
with a total of 41
chapters, covering
current developments in
almost every aspect of
sample surveys, with
references to important
contributions and
available software. It
can serve as a self

appropriate balance
between theory and real
life applications. Each
of the two volumes is
divided into three parts,
with each part preceded
by an introduction,
summarizing the main
developments in the
areas covered in that
part. Volume 29A deals

with methods of sample selection and data processing, with the later including editing and imputation, handling of outliers and measurement errors, and methods of disclosure control. The volume contains also a large variety of applications in specialized areas such as household and business surveys,

marketing research, opinion polls and censuses. Volume 29B is concerned with inference, distinguishing between design-based and model-based methods and focusing on specific problems such as small area estimation, analysis of longitudinal data, categorical data analysis and inference on

distribution functions.

The volume contains also chapters dealing with case-control studies, asymptotic properties of estimators and decision theoretic aspects. Comprehensive account of recent developments in sample survey theory and practice Discusses a wide variety of diverse applications

NEW TO THIS EDITION Two new chapters—Nonparametric Methods of Variance Estimation (Chapter 19) and Analysis of Complex Surveys (Chapter 20)—have been added. These would

greatly benefit the readers. KEY FEATURES □ Covers concepts of unequal probability sampling. □ Provides problems of making inference from finite population using tools of classical inference. □ Describes nonsampling errors including Randomised Response Techniques. □ Gives over 70 worked-
