of sky mythology, creation stories, models of the universe, temples and skyscrapers that each culture has created to celebrate and respond to the power of the night sky. Sections on the archaeoastronomy of South Asia and South East Asia have been expanded, with original photography and new research on temple alignments in Southern India, and new material describing the astronomical practices of Indonesia, Malaysia and other Southeast Asian countries. Beautiful photographs of temples in India and Asia have been added, as well as new diagrams explaining the alignment of these structures and the astronomical underpinnings of temples within the Pallava and Chola cultures. From new fieldwork in the Four Corners region of North America, Dr. Penprase has included accounts of

Pueblo skywatching and photographs of ceremonial kivas that help elucidate the rich astronomical knowledge of the Pueblo people. The popular “ Archaeoastronomy of Skyscrapers ” section of the book has been updated as well, with new interpretations of skyscrapers in Indonesia, Taiwan and China. With the rapid pace of discovery in astronomy and astrophysics, entirely new perspectives are emerging about dark matter, inflation and the future of the universe. The Power of Stars puts these discoveries in context and describes how they fit into the modern perspective of cosmology, which has arisen from the universal human response to the sky that has inspired both ancient and modern cultures.

Students learn astronomy by doing astronomy.

This volume brings together educational effectiveness research and international large-scale assessments, demonstrating how the two fields can be applied to inspire and improve each other, and providing readers direct links to instruments that cover a broad range of topics and have been shown to work in more than 70 countries. The book 's initial chapters introduce and summarize recent discussions and developments in the conceptualization, implementation, and evaluation of international large-

scale context assessments and provide an outlook on possible future developments. Subsequently, three thematic sections – “ Student Background ” , “ Outcomes of Education Beyond Achievement ” , and “ Learning in Schools ” – each present a series of chapters that provide the conceptual background for a wide range of important topics in education research, policy, and practice. Each chapter defines a conceptual framework that relates recent findings in the educational effectiveness research literature to current issues in education policy and practice. These frameworks were used to develop interesting and relevant indicators that may be used for meaningful reporting from international assessments, other cross-cultural research, or national studies.

Using the example of one particular survey (the Programme for International Student Assessment (PISA 2015)), this volume links all theoretical considerations to fully developed questionnaire material that was field trailed and evaluated in questionnaires for students and their parents as well as teachers and principals in their schools. The primary purposes of this book are to inform readers about how education effectiveness research and international large-scale assessments are already interacting to inform research and policymaking; to identify areas where a closer collaboration of both fields or input from other areas could further improve this work; to provide sound theoretical frameworks for future work in both fields; and finally to relate these theoretical

debates to currently available and evaluated material for future context assessments.

This volume provides a complete and timely guide to the use of adeno-associated virus (AAV) vectors for genetic manipulation of mammalian tissues. Beginning with methods for the design and characterization of AAV vectors, the book continues with protocols for AAV delivery to various components of the central nervous system, to a number of sensory systems, and to a broad range of other tissues. Novel techniques such as ultrasound-targeted delivery to the brain, subpial delivery to the spinal cord, and subILM delivery to the retina are accompanied by chapters that provide an overview and comparison of current methods for

AAV delivery to tissues such as brain, heart, liver, and lung. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, readily reproducible step-by-step laboratory protocols, and tips for troubleshooting and avoiding known pitfalls. Authoritative and comprehensive, *Adeno-Associated Virus Vectors: Design and Delivery* aims to enhance the utility of AAV vectors for targeted gene transfer to living animals and continue the ongoing development of novel AAV-based gene therapies for human disease.
