"In the Beginning" speaks to
the heart of our present
civilization and all the

civilizations that came before us. It is a very interesting read and I hope you will thoroughly enjoy it. It has a few controversial ideas, which are solely mine and no one else. One day we may all be wondering why it is that we still do not know how our present civilization came to be after only some 6,000 years of existence. How could we have developed so quickly from being hunter gatherer's to suddenly planning our next manned space mission to Mars and even beyond? What drives us to want to know what lies beyond our reach? In this book, you will find some of

the answers to this fascinating subject. Who are we? Do you know? Maybe you will find the answer in this book.

This book offers a self-sufficient treatment of a key tool, game theory and mechanism design, to model, analyze, and solve centralized as well as decentralized design problems involving multiple autonomous agents that interact strategically in a rational and intelligent way. The contents of the book provide a sound foundation of game theory and mechanism design theory which clearly represent the

“science” behind traditional as well as emerging economic applications for the society. The importance of the discipline of game theory has been recognized through numerous Nobel prizes in economic sciences being awarded to game theorists, including the 2005, 2007, and 2012 prizes. The book distills the marvelous contributions of these and other celebrated game theorists and presents it in a way that can be easily understood even by senior undergraduate students. A unique feature of the book is its detailed coverage of mechanism design which is the art of

designing a game among strategic agents so that a social goal is realized in an equilibrium of the induced game. Another feature is a large number of illustrative examples that are representative of both classical and modern applications of game theory and mechanism design. The book also includes informative biographical sketches of game theory legends, and is specially customized to a general engineering audience. After a thorough reading of this book, readers would be able to apply game theory and mechanism design in a principled and mature way to

interdisciplinary studies. Constructivist theory stresses how learners construct new ideas and concepts, while the interdisciplinary method requires that learners approach complex problems from multiple perspectives. The author uses the New York City College of Technology as a model to demonstrate how learning can be embedded in complex, realistic, and relevant environments. As a result, students learn to consider significant issues from a variety of viewpoints and thus negotiate their social landscape. In approaching problems that they recognize as
