Download Free Silo Protect Fire Protection Solution For Silos And Bunkers

Within passive explosion protection the explosion itself is not halted but instead the pressure and flame is released out of the silo ensuring that the internal pressure remains below the design strength of the silo itself. This is achieved through the use of explosion vent panels.

~~Explosion Protection Solutions for Bulk Storage Silos ...~~

If all potential combustion sources cannot be excluded, silos must be protected. Use explosion venting such as EGV explosion vents to protect silos located outside; flameless venting via Q-Box / Q-Rohr ® ® or explosion suppression (Q-Bic™) for indoor silos.

~~Silos | Explosion Protection | Applications | REMBE Inc.~~

To protect the equipment in the event of an explosion, the head and boot section can be protected by a fire or explosion suppression system. To prevent explosions, the elevators can also be equipped with a system that maintains the dust concentration at least 25% below the lower explosive limit at all times during operation.
