Elisha Cooper spent a year hanging out at a Chicago high school— listening and sketching students. He followed eight kids, mostly seniors, through their entire year, and by telling their specific stories he gives us a more general picture of what it's like to be a high school student. Part documentary, part sketchbook, this is a, thoroughly entertaining account.

Cutnell and Johnson has been the #1 text in the algebra-based physics market for almost 20 years. The 10th edition brings on new co-authors: David Young and Shane Stadler (both out of LSU). The Cutnell offering now includes enhanced features and functionality. The authors have been extensively involved in the creation and adaptation of valuable resources for the text. This edition includes chapters 1-17.

Have you always wanted to learn more about how roller coasters work? I'm not talking about the basic "roller coasters use gravity!" descriptions you're used to. I'm talking about learning in-depth about the nitty gritty engineering details, like: How do roller coaster engineers know what size motor is needed to pull the train to the top of the lift hill and how much will it cost to operate it? What material are the wheels made out of and how does it affect the performance of the ride? What is the difference between LIM and LSM propulsion? How does the control system on a racing or dueling coaster time up the near collision moments perfectly every single time? All of these questions and more are answered in the latest edition of *Coasters 101: An Engineer's Guide to Roller Coaster Design*. "I thought it was great. It was a good first look at roller coaster design. It also gave great information and details about roller coasters in general." - Adrina from Goodreads "Thanks for writing a very good book. I could not put it down. Lot's of great information. I am a technology and engineering teacher and the information I found here is very helpful in trying to get students more excited about engineering."
