Demonstrates how data, methods and theories from sociolinguistics and creole studies synergize and mutually benefit each subfield.

This volume provides a broad coverage of the intersection of sociolinguistic variation and language acquisition. Favoured by the current scientific context where interdisciplinarity is particularly encouraged, the chapters bring to light the complementarity between the social and cognitive approaches to language acquisition. The book integrates sociolinguistic and psycholinguistic issues by bringing together scholars who have been developing conceptions of language acquisition across the lifespan that take into account language-internal and cross-linguistic variation in contexts of both first and second language acquisition as well as of first and second dialect acquisition. The volume brings together theoretical and empirical research and provides an excellent basis for scholars and students wanting to delve into the social and cognitive dimensions of both the production and perception of sociolinguistic variation. The book enables the reader to understand, on the one hand, how variation is acquired in childhood or at a later stage and, on the other, how perception and production feed into one another, thus building up our understanding of the social meanings underpinning language variation.

The study of how linguistic variation is acquired is considered a nascent field in both psycho- and sociolinguistics. Within that research context, this book aims at two objectives. First, it wants to help bridging the gap between researchers working on acquisition from different theoretical backgrounds. The book therefore includes contributions by both psycho- and sociolinguists, and by representatives of further relevant sub-disciplines of linguistics, including historical linguistics and dialectology. Second, in order to enable cross-linguistic comparison, the book brings together research carried out in different sociolinguistic constellations, as most obviously found in different language areas or different countries.

Investigates when and how preschool children acquire the vernacular norms of the community they come from.

"First issued as an Oxford University Press paperback, 2015"--Title page verso.

Language acts are acts of identity, and linguistic variation reflects the multifaceted construction of verbal alternatives for transmitting social meaning, where style-shifting represents our ability to take up different social positions due to its potential for linguistic performance, rhetorical stance-taking and identity projection.Traditional variationist conceptualizations of style-shifting as a primarily responsive phenomenon seem unable to account for all stylistic choices. In contrast, more recent formulations see stylistic variation as initiative, creative and strategic in personal and interpersonal identity construction and projection, making a significant contribution to our understanding of this aspect of sociolinguistic variation. In this volume social constructivist approaches to style-shifting are further developed by bringing together research which suggests that people make stylistic choices aimed at conveying (and achieving) a particular social categorization, sociolinguistic meaning, and/or to project a specific positioning in society. Therefore, there is a need, we collectively argue, to adopt permeable and flexible multidimensional, multidisciplinary and interdisciplinary approaches to speaker agency that take into consideration not only reactive but also proactive motivations for stylistic variation, and where individuals rather than groups and their strategies are the main focus when examining style-shifting in public. This book will be of interest to advanced students and academics in the areas of sociolinguistics, dialectology, social psychology, anthropology and sociology.

This book comprises a series of studies by a number of scholars working on what might broadly be termed the " medieval " period of the history of English, focusing on Old English, Middle English, and the relatively less well-documented period of transition from the former to the latter. The volume brings together contributions not only from a variety of fields, ranging from semantics and syntax to prosody and phonology, but also from different theoretical standpoints, in order to improve the reader ' s understanding of the rapid changes that affect the language at this time. The collection of papers here should be of interest to all scholars and students working on Old or Middle English, as well as to students of historical linguistics in general, given that many of the processes and methodological parameters described here will prove to be directly applicable to the study of other periods and of other languages.

This book provides a fascinating account of the psycholinguistic and social factors behind variation in speech timing in US English. With detailed discussions of its methods and data, it also acts as a valuable model for conducting corpus (socio)phonetic research.

Divided into three main sections on Phonology, Syntax and Semantics, this new volume on variation in French aims to provide a snapshot of the state of sociolinguistic research inside and outside metropolitan France. From a diatopic perspective, varieties in France, Belgium, Switzerland, Africa and Canada are considered, mainly with respect to phonological features but also focusing on syntactic and lexical evolutions (the relative clause in Ivorian French and discourse markers in Canadian French). The acquisition of stylistic features of French figures in chapters on both first and second language learners and variation across different genres is addressed with respect to non-standard non-finite forms. Finally, a section on semantic change traces the way that interactional and other socio-historical factors affect word meaning. The volume will appeal to (socio-)linguists with an interest in contemporary French as well as to advanced undergraduates and post-graduate students of French and specialists in the field.
