Standard Specification for Plumbing, Sanitary Works

Stoneware is a broad term for pottery or other ceramics fired at a relatively high temperature. Technically, stoneware is a vitreous or semi-vitreous ceramic made primarily from stoneware clay or non-refractory fire clay. Whether vitrified or not, it is nonporous (does not soak up liquids); it may or may not be glazed. Historically, across the world, it has been developed after earthenware and ...

ASTM C126[13 Standard Specification for Ceramic Glazed ...

When it comes to a test fire, it takes less time to figure out what you're going to make from this, and you won't have to waste as much time and as much glaze. These are the primary advantages to this, and its why people choose single-fired glazes as an option when it comes to making some amazing pieces of pottery that work for you, and work for others as well.

All About Single Fire Glazing Pottery - Spinning Pots

Nuka glaze is a very old type of pottery glaze, and it was done via the process of burning ash. The reason why this would work is because of the following: The glaze would have a lot of silica from the ash in it You can also add stone, creating a sandy broken or gray finish to it
