Staying Alive: Women, Ecology and Development by Vandana Shiva

Inspired by women's struggles for the protection of nature as a condition for human survival, award-winning environmentalist Vandana Shiva shows how ecological destruction and the marginalization of women are not inevitable, economically or scientifically. She argues that "maldevelopment"--the violation of the integrity of organic, interconnected, and interdependent systems that sets in motion ...

"Presents a clear case for why our current development paradigm is more accurately characterized as what Vandana Shiva calls 'maldevelopment'--the violation of the integrity of organic, interconnected and interdependent systems that sets in motion a process of exploitation, inequality, violence, and

File Type PDF Staying Alive Women Ecology And Development Vandana Shiva

injustice that is dragging the world down a path of self-destruction, threatening survival itself"--

Taking the three related concerns of development, ecology and gender, this book argues that there is an intimate link between the degradation of women and the degradation of nature in contemporary society. Both arise from assumptions that guide maldevelopment, also known as economic development. This maldevelopment -- and consequently, science, technology, politics -- is exploitative by definition, and every area of human activity guided by it marginalises and burdens women and nature. The author argues that there is only one path to survival and liberation for nature, woman and man, and that path is the ecological one, of harmony, sustainability and diversity, as opposed to domination, exploitation and surplus. In developing her thesis she explores the unique place of women in the environment, both as its saviours and as victims of ecological maldevelopment. Her analysis differs from most conventional analyses of environmentalists and feminists, which have focused on women in the Third World as special victims of environmental degradation. Shiva discusses the challenges that women in ecology movements are creating, and explores how their struggles constitute a non-violent, non-gendered and humanity-inclusive alternative to dominant science, technology and development paradigms.

Biotechnology is the single most powerful bundle of new technologies currently under development --. It is also the most intrusive and determinative technology relating to nature generally and the human body specifically. This Reader brings together some of the most important work from feminists and environmentalists critical of the headlong rush into what is likely to prove a technological minefield. As such

File Type PDF Staying Alive Women Ecology And Development Vandana Shiva

it will be essential reading for students, scholars and activists in social studies of science, women's studies, development and environmental studies.

Vandana Shiva has established herself as a leading independent thinker and voice for the South in that critically important nexus where questions of development strategy, the environment and the position of women in society coincide. In this new volume, she brings together her thinking on the protection of biodiversity, the implications of biotechnology, and the consequences for agriculture of the global pre-eminence of Western-style scientific knowledge. In lucid and accessible fashion, she examines the current threats to the planet's biodiversity and the environmental and human consequences of its erosion and replacement by monocultural production. She shows how the new Biodiversity Convention has been gravely undermined by a mixture of diplomatic dilution during the process of negotiation and Northern hi-tech interests making money out of the new biotechnologies. She explains what these technologies involve and gives examples of their impact in practice. She questions their claims to improving natural species for the good of all and highlights the ethical and environmental problems posed. Underlying her arguments is the view that the North's particular approach to scientific understanding has led to a system of monoculture in agriculture - a model that is not being foisted on the South, displacing its societies' ecologically sounder, indigenous and age-old experiences of truly sustainable food cultivation, forest management and animal husbandry. This rapidly accelerating process of technology and system transfer is impoverishing huge numbers of people, disrupting the social systems that provide them with security and dignity, and will ultimately result in a sterile planet in both North and South. In a policy intervention

File Type PDF Staying Alive Women Ecology And Development Vandana Shiva

of potentially great significance, she calls instead for a halt, at international as well as local level, to the aid and market incentives to both large-scale destruction of habitats where biodiversity thrives and the introduction of centralised, homogenous systems of cultivation.

Collection of five papers which discuss the importance of biodiversity. Heffa Schucking and Patrick Anderson analyse the dominant paradigm of conservation and reflect on its lacunae. Andrew Gray describes his experiences with indigenous people of Latin America. Larry Lohmann reflects the conservation strategies of the peasant and forest dwelling communities in the case of Thailand. David Cooper provides a critique of the global biodiversity convention and suggest vital components needed for a meaningful agreement. Vandana Shiva attempts to show that production based on principles of uniformity is the biggest threat to biodiversity.

The Green Revolution has been heralded as a political and technological achievement -- unprecedented in human history. Yet in the decades that have followed it, this supposedly nonviolent revolution has left lands ravaged by violence and ecological scarcity. A dedicated empiricist, Vandana Shiva takes a magnifying glass to the effects of the Green Revolution in India, examining the devastating effects of monoculture and commercial agriculture and revealing the nuanced relationship between ecological destruction and poverty. In this classic work, the influential activist and scholar also looks to the future as she examines new developments in gene technology.

Essays discuss nuclear proliferation, chemical pollution, land

rights, childbirth, infanticide, ecology, and feminist activities around the world

This revised edition of Carolyn Merchant's classic *Reinventing Eden* has been updated with a new foreword and afterword. Visionary quests to return to the Garden of Eden have shaped Western Culture. This book traces the idea of rebuilding the primeval garden from its origins to its latest incarnations and offers a bold new way to think about the earth.

The must-have health bible that explains exactly how to stay in radiant, optimal health all year round. Are you confused about what supplements you should be taking? Do you want to know how you can reverse the effects of pollution on your body? Would you like to eat seasonally? Drawing on Dr Jenny Goodman's 20+ years' experience as a medical doctor, lecturer and qualified nutritionist, *Staying Alive in Toxic Times* sets out exactly what to eat in order to live our healthiest lives, and how to adapt our lifestyle according to the season we are in. Dr Jenny Goodman lays out how to safely and effectively supplement your diet with vitamins and minerals, explains what really works in terms of detoxing your body, and sorts through the confusing myriad of diets and healthy eating fads, using her expertise to myth-bust. *Staying Alive in Toxic Times* also reveals how to avoid seasonal health hazards, such as indoor pollution, hay fever and SAD. With so many people feeling tired, ill and run-down, this timely guide is what everyone needs to read in order to live vibrant, happy and long lives.
