Leningrad school of theoretical physics. This book is based on his lecture course for graduate students. The lectures present a concise, step-by-step construction of the relativistic theory

And Cosmology

STRONG INTERACTIONS OF HADRONS

The strong interaction is a gauge interaction mediated by a massless, spin 1 gluon, g , which is electrically neutral but carries a composite colour such as red-blue. The coupling constant is known as α_s (alpha-strong) and the theory is known as Quantum Chromodynamics or QCD in analogy with QED. Note that, unlike in QED, the exchange quantum is also a source, so processes such as the branching of one gluon into two can

Hadrons, baryons, mesons -
HyperPhysics Concepts

"The fundamental strong interaction holds the constituent quarks of a hadron together, and the residual force holds hadrons together with each other, such as the proton and neutrons in a nucleus."

What Is the Strong Force? | Live Science

Strong interaction affects hadrons (i.e. particles made from quarks). It binds the quarks together but a residual effect of this is to bind the nucleons

Fundamental Forces and Exchange Particles | S-cool, the ...

String theory was originally developed during the late 1960s and early 1970s as a never completely successful theory of hadrons, the subatomic particles like the proton and neutron that feel the strong interaction.

hadrons: baryons (proton, neutron) and antibaryons (antiproton and antineutron) mesons (pion, kaon). Baryon number as a quantum number. Conservation of baryon number. The proton is the only stable baryon into which other baryons eventually decay.

Classification of particles

In particle physics, a hadron */ˈhædrən/* is a subatomic composite particle made of two or more quarks held together by the strong force in a similar way as molecules are held together by the electromagnetic force. Most of the mass of ordinary matter comes from two hadrons: the proton and the neutron. Hadrons are categorized into two families: baryons, made of an odd number of quarks – usually three quarks – and mesons,

High Energy. Basically, quarks combine with quarks itself or with anti-quarks, to form stable hadrons. Three main categories of hadrons are baryons, antibaryons, and mesons.

Physics Nuclear Physics

Difference Between Leptons and Hadrons | Compare the ...

Because all hadrons interact by the strong interaction, and yet they can decay into leptons (i.e. in Beta + or - decay) and I thought leptons only felt the weak interaction. So do hadrons "interact" by the strong interaction (and by "interaction", I'm guessing it means they feel the force), and they decay by the weak interaction.

Interactions / Weak / Strong / Decay = confusion! - The ...
