Test Driven Development (TDD) is software development approach in which test cases are developed to specify and validate what the code will do. In simple terms, test cases for each functionality are created and tested first and if the test fails then the new code is written in order to pass the test and making code simple and bug-free.

In Extreme Programming, programmers practice Test Driven Development (TDD). They begin developing code by writing a failing executable unit test that demonstrates the existing code base does not currently possess some capability. Once they have a failing unit test, they then write the production code to make the test pass.

Test-Driven Development (TDD) is a philosophy and practice that recommends building and executing tests before implementing the code or a component of a system. By validating them against a series of agreed-to tests, TDD(an Agile Testing practice)improves system outcomes by assuring that the system implementation meets its requirements.
