The Architecture of Happiness will take you on a beguiling tour through the history and psychology of architecture and interior design, and will change the way you look at your home. 'Entertaining, stimulating and witty. Clever, provocative and fresh as a daisy.'

The Architecture of Happiness by Alain de Botton ...

The Architecture of Happiness is Alain de Botton's exploration of the hidden links between buildings and our well being Bestselling author Alain de Botton has written about love, travel, status and how philosophy can console us. Now he turns his attention to one of our most intense but often hidden love affairs: with our houses and their furnishings.

Bestselling author Alain de Botton considers how our private homes and public edifices influence how we feel, and how we could build dwellings in which we would stand a better chance of happiness. In this witty, erudite look at how we shape, and are shaped by, our surroundings, Alain de Botton applies Stendhal's motto that "Beauty is the promise of happiness" to the spaces we inhabit daily. Why should we pay attention to what architecture has to say to us? de Botton asks provocatively. With his trademark lucidity and humour, de Botton traces how human needs and desires have been served by styles of architecture, from stately Classical to minimalist Modern, arguing that the stylistic choices of a society can represent both its cherished ideals and the qualities it desperately lacks. On an individual level, de Botton has deep sympathy for our need to see our selves reflected in our surroundings; he demonstrates with great wisdom how buildings — just like friends — can serve as guardians of our identity. Worrying about the shape of our sofa or the colour of our walls might seem self-indulgent, but de Botton considers the hopes and fears we have for our homes at a new level of depth and insight. When shopping for furniture or remodelling the kitchen, we don't just consider functionality but also the major questions of aesthetics and the philosophy of art: What is beauty? Can beautiful surroundings make us good? Can beauty bring happiness? The buildings we find beautiful, de Botton concludes, are those that represent our ideas of a meaningful life. The Architecture of Happiness marks a return to what Alain does best — taking on a subject whose allure is at once tantalizing and a little forbidding and offering to readers a completely beguiling and original exploration of the subject. As he did with Proust, philosophy, and travel, now he does with architecture.

The Architecture of Happiness is a dazzling and generously illustrated journey through the philosophy and psychology of architecture and the indelible connection between our identities and our

locations. One of the great but often unmentioned causes of both happiness and misery is the quality of our environment: the kinds of walls, chairs, buildings, and streets that surround us. And yet a concern for architecture is too often described as frivolous, even self-indulgent. Alain de Botton starts from the idea that where we are heavily influences who we can be, and argues that it is architecture's task to stand as an eloquent reminder of our full potential.

The Architecture of Happiness is Alain de Botton's exploration of the hidden links between buildings and our well being. Bestselling author Alain de Botton has written about love, travel, status and how philosophy can console us. Now he turns his attention to one of our most intense but often hidden love affairs: with our houses and their furnishings. He asks: What makes a house truly beautiful? Why are many new houses so ugly? Why do we argue so bitterly about sofas and pictures - and can differences of taste ever be satisfactorily resolved? Will minimalism make us happier than ornaments? To answer these questions and many more, de Botton looks at buildings across the world, from medieval wooden huts to modern skyscrapers; he examines sofas and cathedrals, tea sets and office complexes, and teases out a host of often surprising philosophical insights. The Architecture of Happiness will take you on a beguiling tour through the history and psychology of architecture and interior design, and will forever alter your relationship with buildings. It will change the way you look at your current home - and help you make the right decisions about your next one. 'Engaging and intelligent . . . full of splendid ideas, happily and beautifully expressed' Independent Alain de Botton was born in 1969 and is the author of non-fiction essays on themes ranging from love and travel to architecture and philosophy. His bestselling books include *Essays in Love*; *The Romantic Movement*; *Kiss and Tell*; *Status Anxiety*; *How Proust Can Change Your Life*; *The Pleasures and Sorrows of Work*; *The Art of Travel*; *The Architecture of Happiness* and *Religion for Atheists*. He lives in London and founded The School of Life (www.theschooloflife.com) and Living Architecture (www.living-architecture.co.uk). For more information, consult www.alaindebotton.com.

A study of architecture examines how we both shape and are shaped by our private homes and public edifices and explains how our stylistic choices can be used to increase our chances of happiness.

The news is everywhere. We can't stop constantly checking it on our computer screens, but what is this doing to our minds? We are never really taught how to make sense of the torrent of news we face every day, writes Alain de Botton (author of the best-selling *The Architecture of Happiness*), but this has a huge impact on our sense of what matters and of how we should lead our lives. In his dazzling new book, de Botton takes twenty-five archetypal news stories—including an airplane crash, a murder, a celebrity interview and a political scandal—and submits them to unusually intense analysis with a view to helping us navigate our news-soaked age. He raises such questions as Why are disaster stories often so uplifting? What makes the love lives of celebrities so interesting? Why do we enjoy watching politicians being brought down? Why are upheavals in far-off lands often so boring? In *The News: A User's Manual*, de Botton has written the ultimate guide for our frenzied era, certain to bring calm, understanding and a measure of sanity to our daily (perhaps even hourly) interactions with the news machine. (With black-and-white illustrations throughout.)

Buildings have often been studied whole in space, but never before have they been studied whole in time. *How Buildings Learn* is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, from "satisficing" to "form follows funding," from the evolution of bungalows to the invention of Santa Fe Style, from Low Road military surplus buildings to a High Road English classic like Chatsworth—this is a far-ranging survey of unexplored essential territory. More than any other human artifacts, buildings improve with time—if they're allowed to. *How Buildings Learn* shows how to work

Where To Download The Architecture Of Happiness

with time rather than against it.

From the international bestselling author of *The Architecture of Happiness* and *How Proust Can Change Your Life* comes this lyrical, erudite look at our world of work. We spend most of our time at work, but what we do there rarely gets discussed in the sort of lyrical and descriptive prose our efforts surely deserve. Determined to correct this lapse, armed with a poetic perspective and his trademark philosophical sharpness, Alain de Botton heads out into the world of offices and factories, ready to take in the beauty, interest, and sheer strangeness of the modern workplace. De Botton spends time in and around some less familiar work environments, including warehouses, container ports, rocket launch pads, and power stations, and follows scientists, landscape painters, accountants, cookie manufacturers, therapists, entrepreneurs, and aircraft salesmen as they do their jobs. Along the way, de Botton tries to answer some of the most urgent questions we can pose about work: Why do we do it? What makes it pleasurable? What is its meaning? To what end do we daily exhaust not only ourselves but also our planet? Equally intrigued by work's pleasures and its pains, Alain de Botton offers a characteristically lucid and witty tour of the working day and night, in a book sure to inspire a range of life-changing and wise thoughts.

Can good design truly make us happier? Given that we spend over 80% of our time in buildings, shouldn't we have a better understanding of how they make us feel? This book explores the ways in which buildings, spaces and cities affect our moods. It reveals how architecture and design can make us happy and support mental health and explains how poor design can have the opposite effect. Presented through a series of easy-to-understand design tips and accompanied by beautiful diagrams and illustrations, *Happy by Design* is a fantastic resource for architects, designers and students, or for anybody who would like to better understand the relationship between buildings and happiness.

Anyone who's ever lost sleep over an unreturned phone call or the neighbor's Lexus had better read Alain de Botton's irresistibly clear-headed new book, immediately. For in its pages, a master explicator of our civilization and its discontents turns his attention to the insatiable quest for status, a quest that has less to do with material comfort than with love. To demonstrate his thesis, de Botton ranges through Western history and thought from St. Augustine to Andrew Carnegie and Machiavelli to Anthony Robbins. Whether it's assessing the class-consciousness of Christianity or the convulsions of consumer capitalism, dueling or home-furnishing, *Status Anxiety* is infallibly entertaining. And when it examines the virtues of informed misanthropy, art appreciation, or walking a lobster on a leash, it is not only wise but helpful.

Creating Sensory Spaces celebrates spaces enlivened with sensual richness and provides you with the knowledge and tools necessary to create them. Drawing on numerous built case studies in ten countries and illustrated with over 85 full color images, the book presents a new framework for the design of sensory spaces including light, color, temperature, smell, sound, and touch. Bridging across disciplines of architecture, engineering, phenomenology and perceptual psychology, this book informs the design of buildings and neighborhoods that reclaim the role of the body and all the senses in creating memorable experiences of place and belonging.
