Just before her sixteenth birthday, Brie Eagan dies of a broken heart when her boyfriend tells her he does not love her, and she then must go through the stages of grief, while watching her friends and family try to cope with her death.

If I'd known right then that this was the kid who would grow up to break my heart beyond repair, maybe I would've stayed upstairs on the phone with Tess. Maybe I would've gone to bed early. Maybe I would've begged my parents to take me with them - even though those doctor dinners are pretty much the boringest things ever. But I didn't know. Couldn't know. So instead I shrugged and said something really genius like "Um, whatever." And proceeded to fall totally, madly, crazy in love.

"All disasters are in some sense man-made." Setting the annus horribilis of 2020 in historical perspective, Niall Ferguson explains why we are getting worse, not better, at handling disasters. Disasters are inherently hard to predict. Pandemics, like earthquakes, wildfires, financial crises. and wars, are not normally distributed; there is no cycle of history to help us anticipate the next catastrophe. But when disaster strikes, we ought to be better prepared than the Romans were when Vesuvius erupted, or medieval Italians when the Black Death struck. We have science on our side, after all. Yet in 2020 the responses of many developed countries, including the United States, to a new virus from China were badly bungled. Why? Why did only a few Asian countries learn the right lessons from SARS and MERS? While populist leaders certainly performed poorly in the face of the COVID-19 pandemic, Niall Ferguson argues that more profound pathologies were at work--pathologies already visible in our responses to earlier disasters. In books going back nearly twenty years, including Colossus, The Great Degeneration, and The Square and the Tower, Ferguson has studied the foibles of modern America, from imperial hubris to bureaucratic sclerosis and online fragmentation. Drawing from multiple disciplines, including economics, cliodynamics, and network science, Doom offers not just a history but a general theory of disasters, showing why our ever more bureaucratic and complex systems are getting worse at handling them. Doom is the lesson of history that this country--indeed the West as a whole--urgently needs to learn, if we want to handle the next crisis better, and to avoid the ultimate doom of irreversible decline.

In this wholly original study, David Wyatt uses the metaphor of fire to tell the story of California. Wyatt focuses this catastrophic history of his native state on five events of social combustion and tangible fire that swept through California, altering its physical and political landscape and the way both were represented in art and literature. Wyatt begins with the accidental importation and spread of the wild oat in the 1770s, a process that had its human parallel in the Spanish invaders. He then explores the impact of four other significant events: the Gold Rush, the 1906 earthquake and fire, the post-World War II defense-industry boom, and the fire of race that erupted in Watts in 1965. This fifth fire, which flared throughout the Chinese and Mexican immigration experiences and the internment of Japanese Americans in World War II, has been at the core of California's history, Wyatt argues. From the journals of a Gold Camp mineress to Amy Tan's novels, from Ansel Adams's photography to Roman Polanski's films, Wyatt brings into dialogue a wide range of powerful, moving voices.

Modern humans have come a long way in the seventy thousand years they've walked the earth. Art, science, culture, trade—on the evolutionary food chain, we're true winners. But it hasn't always been smooth sailing, and sometimes—just occasionally—we've managed to truly f*ck things up. Weaving together history, science, politics and pop culture, *Humans* offers a panoramic exploration of humankind in all its glory, or lack thereof. From Lucy, our first ancestor, who fell out of a tree and died, to General Zhou Shou of China, who stored gunpowder in his palace before a lantern festival, to the Austrian army attacking itself one drunken night, to the most spectacular fails of the present day, *Humans* reveals how even the most mundane mistakes can shift the course of civilization as we know it. Lively, wry and brimming with brilliant insight, this unique compendium offers a fresh take on world history and is one of the most entertaining reads of the year.

From the acclaimed Booker Prize-winning author comes a dazzling novel of family, love and love's disappointments. Anna's aged mother is dying. Condemned by her children's pity to living, subjected to increasingly desperate medical interventions, she turns her focus to her hospital window, through which she escapes into visions of horror and delight. When Anna's finger vanishes and a few months later her knee disappears, Anna too feels the pull of the window. She begins to see that all around her, others are similarly vanishing, yet no one else notices. All Anna can do is keep her mother alive. But the window keeps opening wider, taking Anna and the reader ever deeper into an eerily beautiful story of grief and possibility, of loss and love and orange-bellied parrots. Hailed on publication in Australia as Richard Flanagan's greatest novel yet, *The Living Sea of Waking Dreams* is a rising ember storm illuminating what remains when the inferno beckons: one part elegy, one part dream, one part hope.

Every new American President has a plan to bring about peace between the Israelis and the Palestinians, and every one fails. Every "peace process" has failed in its primary objective: to establish a stable and lasting accord between the two parties, such that they can live together side-by-side in friendship rather than enmity. But why? And what can be done instead? While this failure is a consistent pattern stretching back decades, there is virtually no public discussion or even basic understanding of the primary reason for this failure. *The Palestinian Delusion* is unique in situating the Israeli/Palestinian conflict within the context of the global jihad that has found renewed impetus in the latter portion of the twentieth century and the beginning of the twenty-first. Briskly recounting the tumultuous history of the "peace process," Robert Spencer demonstrates that the determination of diplomats, policymakers, and negotiators to ignore this aspect of the conflict has led the Israelis, the Palestinians, and the world down numerous blind alleys. This has often only exacerbated, rather than healed, this conflict. *The Palestinian Delusion* offers a general overview of the Zionist settlement of Palestine, the establishment of the State of Israel, and the Arab Muslim reaction to these events. It explores the dramatic and little-known history of the various peace efforts—showing how and why they invariably broke down or failed to be implemented fully. *The Palestinian Delusion* also provides shocking evidence from the Palestinian media, as well as statements from the Palestinian leadership, showing that negotiations between Israel and the Palestinians will never work. But there is still cause for hope. Spencer delineates a realistic, viable alternative to the endless and futile "peace process," that shows how the Jewish State and the Palestinian Arabs can truly coexist in peace—without illusions or unrealistic expectations.

An instant #1 New York Times bestseller. The definitive behind-the-scenes story of Trump's final year in office, by Phil Rucker and Carol Leonnig, the Pulitzer-Prize winning reporters and authors of *A Very Stable Genius*. "Chilling." - Anderson Cooper "Jaw-dropping." - John Berman "Shocking." - John Heilemann "Explosive." - Hallie Jackson "Blockbuster new reporting." - Nicolle Wallace "Bracing new revelations." - Brian Williams "Bombshell reporting." - David Muir The true story of what took place in Donald Trump's White House during a disastrous 2020 has never before been told in full. What was really going on around the president, as the government failed to contain the coronavirus and over half a million Americans perished? Who was influencing Trump after he refused to concede an election he had clearly lost and spread lies about election fraud? To answer these questions, Phil Rucker and Carol Leonnig reveal a dysfunctional and bumbling presidency's inner workings in unprecedented, stunning detail. Focused on Trump and the key players around him—the doctors, generals, senior advisers, and Trump family members—Rucker and Leonnig provide a forensic account of the most devastating year in a presidency like no other. Their sources were in the room as time and time again Trump put his personal gain ahead of the good of the country. These witnesses to history tell the story of him longing to deploy the military to the streets of American cities to crush the protest movement in the wake of the killing of George Floyd, all to bolster his image of strength ahead of the election. These sources saw firsthand his refusal to take the threat of the coronavirus seriously—even to the point of allowing himself and those around him to be infected. This is a story of a nation sabotaged—economically, medically, and politically—by its

own leader, culminating with a groundbreaking, minute-by-minute account of exactly what went on in the Capitol building on January 6, as Trump's supporters so easily breached the most sacred halls of American democracy, and how the president reacted. With unparalleled access, Rucker and Leonnig explain and expose exactly who enabled—and who foiled—Trump as he sought desperately to cling to power. A classic and heart-racing work of investigative reporting, this book is destined to be read and studied by citizens and historians alike for decades to come.

Its never been more important to engage a child's scientific curiosity, and Sean Connolly knows just how to do it with lively, hands-on, seemingly "dangerous" experiments that pop, ooze, crash, and teach! Now, the author of *The Book of Totally Irresponsible Science*, takes it one step further: He leads kids through the history of science, and then creates amazing yet simple experiments that demonstrate key scientific principles. Tame fire just like a Neanderthal with the Fahrenheit 451 experiment. Round up all your friends and track the spread of "disease" using body glitter with an experiment inspired by Edward Jenner, the vaccination pioneer who's credited with saving more lives than any other person in history. Rediscover the wheel and axle with the ancient Sumerians, and perform an astounding experiment demonstrating the theory of angular momentum. Build a simple telescope just like Galileo's and find the four moons he discovered orbiting Jupiter (an act that helped land him in prison). Take a less potentially catastrophic approach to electricity than Ben Franklin did with the Lightning Mouth experiment. Re-create the Hadron Collider in a microwave with marshmallows, calculator, and a ruler it won't jeopardize Earth with a simulated Big Bang, but will demonstrate the speed of light. And it's tasty! By letting kids stand on the shoulders of Aristotle, Newton, Einstein, the Wright brothers, Marie Curie, Darwin, Watson and Crick, and more, *The Book of Potentially Catastrophic Science* is an uncommonly engaging guide to science, and the great stories of the men and women behind the science.

Through journal entries, sixteen-year-old Miranda describes her family's struggle to survive after a meteor hits the moon, causing worldwide tsunamis, earthquakes, and volcanic eruptions.
