In simplest terms, the fashion industry could be described as the business of making clothes, but that would omit the important distinction between fashion and apparel. Apparel is functional clothing, one of humanity's basic needs, but fashion incorporates its own prejudices of style, individual taste, and cultural evolution .

To set that in context, the fashion industry emits about the same quantity of GHGs per year as the entire economies of France, Germany, and the United Kingdom combined. Despite efforts to reduce emissions, the industry is on a trajectory that will exceed the 1.5-degree pathway to mitigate climate change set out by the Intergovernmental Panel on Climate Change (IPCC) and ratified in the 2015 Paris agreement.

~~Fashion on climate | McKinsey~~

The global fashion industry is generating a lot of greenhouse gases due to the energy used during its production, manufacturing, and transportation of the millions garments purchased each year. Synthetic fibers (polyester, acrylic, nylon, etc.), used in the majority of our clothes, are made from fossil fuel , making production much more energy-intensive than with natural fibers.

~~Environmental Impacts of the Fashion Industry...~~

## Download Ebook The Fashion Industry And Its Careers An Introduction

Fossil fuel-based fibres accounted for 65% of fibres used in the fashion industry in 2015. Fashion, fast fashion and the environment. Beyond the raw materials stage, the energy used in manufacturing, transporting, packaging and selling a garment all make a contribution to its emissions footprint. But the climate impact doesn't stop at the shop – what happens during a garment's lifetime of use also contributes, as does the end of its life.
