Although clinicians use concepts
such as the unconscious and
dissociation, in actuality many do
not take into account the newly
emerging neuropsychological
attributes of nonconscious
processes. As a result,
assumptions and lack of clarity
overtake information that can
become central in our clinical
work.

the Unconscious

The Neuropsychology of the
Unconscious by Dr Efrat Ginot
provides a sophisticated
explanation of how complex
neurobiological mechanisms
interface with unconscious
processes, involved in emotional
self-states such as bonding, fear,
anxiety, and trauma. The book is
introduced with an elegant
foreword by Dr Allan Schore,
whose work has been largely
dedicated to examining the role of
the brain ' s right hemisphere in
shaping implicit processes and the
unconscious mind.

The distinction between conscious
and unconscious influences on
behavior has been central to
neuropsychological research on
memory. Establishing that
transition from unaware to aware
processing can occur for one
cognitive ability offers hope that
similar transitions can be induced
in others, with potentially
important consequences for the
rehabilitation of a range of
cognitive disorders.
