The book describes how Lisa Meitner, of Jewish heritage, found herself working as a physicist at the Kaiser Wilhelm Institute in Berlin when the Nazis came to power in 1933; how she was hounded out of the country and forced to relocate to Sweden; how German chemists Otto Hahn and Fritz Strassman continued with the project — on the effect of bombarding uranium (the heaviest known element at the time) with neutrons, a project which Lise herself had initiated, being the intellectual leader of the group. It describes how Hahn and Strassmann, with whom she kept in touch, came up with some extraordinary results which they were at a loss to explain; how Lise, and her nephew Otto Frisch, who was also a physicist, confirmed what they had achieved - the "splitting of the atom", no less, and provided them with a theoretical explanation for it. This laid the foundation for nuclear power, medical-

scanning technology, radiotherapy, electronics, and of course, the atomic bomb - the creation of which filled Lise with horror. It describes the crucial part that Lise played in our understanding of the world of atoms, and how deliberate and strenuous attempts were made to deny her contribution; to belittle her achievements, and to write her out of the history books, even though Albert Einstein said she was even "more talented than Marie Curie herself". The author is fortunate and honoured to have been granted several interviews with Lise's nephew Philip Meitner - himself a refugee from the Nazis - who with his wife Anne, provided much valuable information and many photographs.

This is the first of three volumes that chart the history of the science fiction magazine from the earliest days to the present. This first volume looks at the exuberant years of the pulp magazines. It traces the growth and development of the science fiction magazines from when Hugo Gernsback launched the very first, *Amazing Stories*, in 1926 through to the birth of the atomic age and the death of the pulps in the early 1950s. These were the days of the youth of science fiction, when it was brash, raw and

exciting: the days of the first great space operas by Edward Elmer Smith and Edmond Hamilton, through the cosmic thought variants by Murray Leinster, Jack Williamson and others to the early 1940s when John W. Campbell at Astounding did his best to nurture the infant genre into adulthood. Under him such major names as Robert A. Heinlein, Isaac Asimov, A. E. van Vogt and Theodore Sturgeon emerged who, along with other such new talents as Ray Bradbury and Arthur C. Clarke, helped create modern science fiction. For over forty years magazines were at the heart of science fiction and this book considers how the magazines, and their publishers, editors and authors influenced the growth and perception of this fascinating genre.

Our parents gave us a private education grades 1 - 12 and my Father helped get me a summer job to pay for college at the local General Motors plant where he worked. In college I had two majors, one in Political Science and one in Communications. As part of my Communications major I got an internship at the local rock n roll radio station which resulted in becoming the morning show producer for the the well known morning show team of Karlson and McKenzie with that radio station. This story is about what happened from there. Its about dealing with the unpredictable changes that happen with your company and your career and what happens when they overlap.
