Kids Can Touch, Taste, Smell At Heritage Park's Sensory Garden

The researchers can only speculate as to why the declining sense of smell in older adults seems to be odors specific, and why, in some cases, liking is largely unaffected.

Toddlers will enjoy accompanying Elmo as he smells freshly cut grass, sees himself in the mirror, touches squishy finger paint, tastes a sardine-and-jelly sandwich, listens to lovely music, and much more. Charming illustrations add sweetness and humor to a pitch-perfect introduction to the five senses. Elmo has never been more loveable than he is in the pages of this sturdy board book!

As an unabashed dog lover, Alexandra Horowitz is naturally curious about what her dog thinks and what she knows. As a cognitive scientist she is intent on understanding the minds of animals who cannot say what they know or feel. This is a fresh look at the world of dogs -- from the dog's point of view. The book introduces the reader to the science of the dog -- their perceptual and cognitive Abilities -- and uses that introduction to draw a picture of what it might be like to bea dog. It answers questions no other dog book can -- such as: What is a dog's sense of time? Does she miss me? Want friends? Know when she's been bad? Horowitz's journey, and the insights she uncovered from studying her own dog, Pumpernickel, allowed her to understand her dog better, and appreciate her more through that understanding. The reader will be able to do the same with their own dog. This is not another dog training book. Instead, inside of a Dogwill allow dog owners to look at their pets' behaviour in a different, and revealing light, enabling them to understand their dogs and enjoy their relationship even more.

Anne Lilli Kvam's newest book contains all the information needed to train your dog to use their fabulous sense of smell to search and track everything from treats and toys to lost keys and people! Kvam provides clear and detailed step-by-step instructions for each exercise, and puts a strong emphasis on the importance of using positive reinforcement in training. Training your dog to use their nose to search and track is a unique activity that you and your dog can enjoy together and will enrich the lives of all participants, human and dog alike!

A romantic story about a blind artist who, since childhood, lost the ability to see the world in colors. He will find a person who will show him all the colors of the world, and in return will share with him his unique spiritual world, full of colors invented by him.

"All of us sharing lives with dogs have noticed that their senses are superior to ours in many ways. How conscious are you of your dog's senses? Do you really know how well your dog can see, smell or hear? Have you thought of the fact that your dog has a priority of how to deploy his senses in various circumstances? Just like us, dogs can see, smell, hear, taste and feel, but they also have a sense of balance. Additionally, just like you and me, they have a sense of the condition of and movements in muscles and joints - a kinesthetic sense, and a visceral sense which reports the status to their brains. When the dog appears to be having a bad day, it may be one of those two senses reporting that something is not quite right. Be particularly attentive to the subtle signs dogs may show when they are having one of those bad days: Unfortunately, we miss most of these subtle signs. What we know about how dogs sense their worlds is changing, and new research is being published each year. In the 1970s I was taught that dogs can see only in black and white, and now we know they see in color, although not exactly the same rainbow as you and I. Recent research documents that dogs can smell, or sense, heat (Morell, 2020). Using their noses, dogs can detect things warmer than the surrounding environment and it seems that 31C (92F) is a limit. Many of you may have learned about birds finding their way using magnetism. Scientist have found that dogs too can sense electromagnetism and can probably find their way using this sense. Strangely enough, dogs will prefer relieving themselves facing north or south. They can simply see which direction is north. They can see the electromagnetism, due to a molecule in their eye called the cryptochrome molecule (Gruber, 2014). Additionally, many people claim to be able to do telepathic communication with dogs. We are truly living in an enriched world. In this book, I will describe some games and exercises where we first and foremost allow dogs to work their way using their outstanding olfactory sense. But we should never fail to be aware that the other senses are present and may be activated if the dog feels it useful"--

The harsh realities of 1970s South African apartheid are witnessed by young narrator Marnus Erasmus, in a story of racial oppression, sexual abuse, lost innocence, and a society driven to the edge of despair

Designing with Smell aims to inspire readers to actively consider smell in their work through the inclusion of case studies from around the world, highlighting the current use of smell in different cutting-edge design and artistic practices. This book provides practical guidance regarding different equipment, techniques, stages and challenges which might be encountered as part of this process. Throughout the text there is an emphasis on spatial design in numerous forms and interpretations -- in the street, the studio, the theatre or exhibition space, as well as the representation of spatial relationships with smell. Contributions, originate across different geographical areas, academic disciplines and professions. This is crucial reading for students, academics and practitioners working in olfactory design.

Nothing is more memorable than a smell. So why do we persist in dismissing the nose as a blunt instrument? Smell is our most seductive and provocative sense, invading every domain of our lives. We can identify our relatives, detect the availability of a potential mate, sniff out danger, and distinguish between good and bad food just with our noses. In this surprising and delightful book, Lyall Watson rescues our most unappreciated sense from obscurity. He brings to light new evidence concerning Jacobson's Organ: an anatomical feature discovered high in the nose in 1811 and dismissed for centuries as a vestigial ghost. Yet recent research has shown Jacobson's Organ to be an incredibly influential pheromonal mechanism that feeds the area of the brain affecting our awareness, emotional states, and sexual behavior. Following the seven classes of smell devised by the pioneering botanist Carolus Linnaeus in his *Odores Medicamentorum*, Watson examines the roles of smell and pheromones in humans, plants, and animals. He reveals the curious ways in which trees communicate their distress, the olfactory abilities of feral children, the bond we have with our offspring, the psychosexual effects of perfume, and the link between smell and memory formation. Jacobson's Organ unlocks the door to the strange world of this mysterious sense.

Do you struggle to find appropriate scenes and monologues for young performers? Whilst there are so many plays to choose from, the selection of material for auditions, exams and competitions can often be overwhelming. Monologues and Duologues For Young Performers offers a new collection of original monologues, duologues and scenes for young actors aged seven to fourteen that come ready-made for performance. With more than thirty new pieces for male and female actors of varying ages, these scenes explore a wide range of themes and characters and the accompanying notes suggest a range of activities for both the teacher and the student to help them develop the piece for performance. All the scenes have been tried and tested by young actors and many have been used in LAMDA examinations as well as for Speech and Drama Festivals and auditions. Each scene is accompanied by notes on character, background and setting as well as a range of drama activities and questions to ask as an actor, making it an ideal resource for those taking part in LAMDA and Trinity Speech and Drama examinations as well as for drama competitions, other examinations, auditions and theatre exploration.
