From the reviews: The purpose of the book under review is to give a survey of methods for the Bayesian or likelihood-based analysis of data. The

author distinguishes between two types of methods: the observed data methods and the data augmentation ones. The observed data methods are applied directly to the likelihood or posterior density of the observed data.

Online Library Tools For

Statistical inference is the process of using data analysis to deduce properties of an underlying distribution of probability.

Inferential statistical analysis infers properties of a population, for example by testing hypotheses and deriving estimates.

It is assumed that the observed data set is

sampled from a larger population. Inferential statistics can be contrasted with descriptive statistics.

Descriptive statistics is solely concerned with properties of the observed data, and it does not re
