The transmission line is a conductor or wire which is designed to carry electrical energy below microwave range from one place to another.

Transmission lines are two or more conductors separated by some insulating medium (two-wire, coaxial, microstrip, etc). Circuit theory is considered in transmission line. Power handling capacity is low.

A waveguide is a special form of transmission line consisting of a hollow, metal tube. The tube wall provides distributed inductance, while the empty space between the tube walls provide distributed capacitance. Wave guides conduct microwave
