TYPOLOGY | meaning in the Cambridge English Dictionary
 A typology is a system for dividing things into different types, especially in science and the social sciences.

Chronicles 150 years of type design with examples ranging from nouveau elegance to scrappy grunge

Despite earlier work by Trubetzkoy, Jakobson and Greenberg, phonological typology is often underrepresented in typology textbooks. At the same time, most phonologists do not see a difference between phonological typology and cross-linguistic (formal) phonology. The purpose of this book is to bring together leading scholars to address the issue of phonological typology, both in terms of the unity and the diversity of phonological systems.

A survey of two literary devices that are indispensable for understanding salvation history A biblical type is a person, place, or thing in salvation history that corresponds to a later person, place, or thing in the scriptural text. An allegory is a passage that says one thing in order to say something else. Both are common literary devices in the Bible that are vital for understanding truths about Jesus Christ found nowhere else. In 40 Questions About Typology and Allegory, Mitchell Chase provides a thorough introduction to both devices, showing where they appear throughout Scripture and the historical roles they have played in biblical interpretation. In a convenient question-and-answer format, Chase answers key questions such as: • Why should interpreters care about typology and allegory? • How do we identify types? • What are the theological assumptions of typology? • Do all types lead to Christ? • What is allegorical interpretation? • How was allegory practiced in the early church? • How should we practice allegorical interpretation? Situating typology and allegory within salvation history, Chase shows how these devices reveal the interconnectedness of Scripture and commonly overlooked aspects of Christ's person and work. Scholars, Bible teachers, and preachers will find this an essential resource for interpreting Scripture more comprehensively.

This textbook provides a critical introduction to major research topics and current approaches in linguistic typology, the study of structural variation in human language and of the limits on that variation. Jae Jung Song draws on a wide range of cross-linguistic data to describe what linguistic typology has revealed both about language in general and about the rich variety of ways in which meaning and expression are achieved in the world's languages. Following an introduction to the subject matter and its history, the first part of the book explores theoretical issues and approaches, as well as practical considerations such as sampling methods and data collection. In the second part, chapters examine variation in particular phenomena, such as word order, case alignment, and evidentiality marking. Each chapter concludes with study questions and suggestions for further reading. The volume will be suitable for undergraduate and graduate students in the fields of linguistic typology and language universals, and as secondary reading for cross-linguistically focused courses in phonology, morphology, syntax, and semantics.

This book presents the major tool types of European Lower and Middle Paleolithic. Building on the typelist of the late François Bordès, with many forms that have been recognized since, it presents working definitions of the types with illustrations and discussions of the variability inherent to lithic typologies. The authors combine classic typological views with current notions of lithic typological variation. This handbook represents not only an important reference source for gaining a practical understanding of how Lower and Middle Paleolithic typology is applied but of the nature of lithic variability in other kinds of assemblages as well.

Ideal in introductory courses dealing with grammatical structure and linguistic analysis, Introduction to Typology overviews the major grammatical categories and constructions in the world's languages. Framed in a typological perspective, the constant concern of this primary text is to underscore the similarities and differences which underlie the vast array of human languages.

A thorough rewriting to reflect advances in typology and universals in the past decade.

This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For "classic" linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints, while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation. To attain these objectives, the series will aim for a standard comparable to that of the leading handbooks in other disciplines, and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings, and up-to-date methodology. The editors, both of the series and of the individual volumes, and the individual contributors, are committed to this aim. The languages of publication are English, German, and French. The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended, and can thus take account of further developments in the field. This conception, coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care, means that there is no set time-table for the publication of the whole series. Each volume will be a self-contained work, complete in itself. The order in which the handbooks are published does not imply any rank ordering, but is determined by the way in which the series is organized: the editor of the whole series enlist a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only by general formal principles. The series editor only intervene where questions of delineation between individual volumes are concerned. It is felt that this (modus operandi) is best suited to achieving the objectives of the series, namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.

This fresh and stimulating work is the first book entirely given to the subject of Moses and Mosaic allusions in the Gospel of Matthew. Also included are the history of the discussion of the subject from Bacon to the present as well as a comprehensive analysis of the depiction of ancient Jewish and Christian persons in Mosaic categories.

This textbook provides an introduction to language typology which assumes minimal prior knowledge of linguistics.
