This textbook provides a comprehensive overview of different methods and sources of information-gathering for peace and conflict students and researchers, as well as the challenges presented by such work. Research on conflict-ridden societies carries special challenges for the collection and evaluation of information about the conflict and its actors. First, due to the nature of information emerging, incentives to misrepresent and propaganda is common. News coverage is sometimes poor and reporting is often incomplete, selective and biased. Second, the sensitivity of the topic and the questions posed in peace and conflict research means that access to and the security of informants can be a problem. Peace and conflict research as a discipline encompasses a number of different approaches for obtaining empirical information which serve as a basis for analyzing various research topics. This book provides a comprehensive overview of different methods and sources of information-gathering for students and researchers, as well as the challenges presented by such work. It offers: tools for evaluating sources and information suggestions on where different types of information can be found advice on using different types of sources, including news reports and written narratives practical guidelines for constructing large-scale datasets insights and guidelines for comparative fieldwork, in-depth interviews, focus groups, and surveys reflection and discussion on important ethical concerns in peace research This book will be of much interest for students and researchers of peace and conflict studies, conflict resolution, war and conflict studies, development studies, security studies and IR, as well as for NGO workers/researchers. Kristine Höglund is Associate Professor at the Department of Peace and Conflict Research, Uppsala University. She has a PhD in Peace and Conflict Research from Uppsala University Sweden (2004). This volume looks at research methods through the lens of peace studies and peace values. Apart from reviewing established methods from peace psychology, it presents some innovative ideas for conducting research in the area of peace psychology. Many of these methods are drawn from the field, from activities used by active peace practitioners. A critical component of this volume is its core argument that peace research should be conducted by peaceful means, and should model peaceful processes. Organized thematically, the volume begins with a review of the established best practices in peace psychology research methodology, including methods for qualitative research, for quantitative research, and participative action networks. In doing so, it also points to some of the limitations of working for peace within the tradition of a single discipline and to the need to expand psychology methodology, to methodologies. Therefore, the second half of the volume proceeds to explore the realm of innovative, relatively unorthodox research methods, such as participatory and workshop methods, the creative arts, and sports for research purposes. The use of new advances in information technology to conduct peaceful research are also discussed. The concluding chapters synthesize key issues from the previous chapters, and links peace psychology with ideas and implementation of research designs and practices. Finally, it discusses the nature of academic knowledge, and more specifically, academic knowledge in peace psychology, and where that fits into the mission to build a more peaceful world. Overall this book aims to provide peace psychologists with an array of possibilities and best practices for approaching their research. Many researchers find the experience of doing research a somewhat lonely, if not isolating, experience. Methodologies in Peace Psychology: Peace Research by Peaceful Means aims to alleviate this feeling as the use of these more innovative methods leads to a closer engagement with the community and a much more social experience of research. This volume is a useful tool for both new and experienced researchers because it provides leads for idealistic young researchers who want their work to make a difference, in addition to encouraging more reflection and analysis for experienced peace psychologists.

This volume calls for an empirical extension of the |local turn| within peace research. Building on insights from conflict transformation, gender studies, critical International Relations and Anthropology, the contributions critique existing peace research methods as affirming unequal power, marginalizing local communities, and stripping the peace kept of substantive agency and voice. By incorporating scholars from these various fields the volume pushes for more locally grounded, ethnographic and potentially participatory approaches. While recognizing that any Ethnographic Peace Research (EPR) agenda must incorporate a variety of methodologies, the volume nonetheless paves a clear path for the much needed empirical turn within the local turn literature.

An award-winning book, Doing Research is a must read. Designed for students across a variety of social science disciplines, it is the first research methods text devoted to conflict analysis and resolution. It begins with a discussion of the philosophical foundations for doing research, providing guidelines on how to develop research questions and how these questions can be addressed with various methodologies. The book presents a wide-ranging treatment of both quantitative and qualitative approaches to the design and analysis of problems of conflict.

This volume brings together perspectives on social identity and peace psychology to explore the role that categorization plays in both conflict and peace-building. To do so, it draws leading scholars from across the world in a comprehensive exploration of social identity theory and its application to some of the world's most pressing problems, such as intrastate conflict, uprising in the middle east, the refugee crisis, global warming, racism and peace building. A crucial theme of the volume is that social identity theory affects all of us, no matter whether we are currently in a state of conflict or one further along in the peace process. The volume is organized into two sections. Section 1 focuses on the development of social identity theory. Grounded in the pioneering work of Dr. Henri Tajfel, section 1 provides the reader with a historical background of the theory, as well as its current developments. Then, section 2 brings together a series of country

case studies focusing on issues of identity across five continents. This section enables cross-cultural comparisons in terms of methodology and findings, and encourages the reader to identify general applications of identity to the understanding of peace as well as applications that may be more relevant in specific contexts. Taken together, these two sections provide a contemporary and diverse account of the state of social identity research in conflict situations and peace psychology today. It is evident that any account of peace requires an intricate understanding of identity both as a cause and consequence of conflict, as well as a potential resource to be harnessed in the promotion and maintenance of peace. Understanding Peace and Conflict Through Social Identity Theory: Contemporary Global Perspectives aims to help achieve such an understanding and as such is a valuable resource to those studying peace and conflict, psychologists, sociologists, anthropologists, public policy makers, and all those interested in the ways in which social identity impacts our world.

This edited book is a new and valuable resource for students, teachers, and practitioners, providing a detailed exploration of how qualitative research can be applied in the field of peace and conflict studies. This book explores considerations and components of designing, conducting, and reporting qualitative research in this field, and also provide exemplars of recent empirical research in peace and conflict studies that employed qualitative methods. Scholars and researchers in peace and conflict studies and peace education face unique challenges in teaching, designing, and conducting qualitative research in these fields. This edited book discusses tips in designing qualitative studies in this area and for teaching emerging peace researchers best practices of qualitative inquiry. In addition, the book discusses some of the trends, challenges, and opportunities associated with research in peace and conflict studies and peace education. Written at a level appropriate for both graduate students and active researchers, the primary audience for this book is those teaching and learning about the application of qualitative methods to peace and conflict studies, as well as those conducting research in this field. There are currently approximately 230 graduate programs in peace and conflict studies. This book also provides a useful tool for researchers and students in other academic disciplines who are interested in qualitative research. Such disciplines might include education, sociology, criminology, gender studies, psychology, political science, and others.

This study thinks with photography about peace. It asks how photography can represent peace, and how such representation can contribute to peace. The book offers an original critique of the almost exclusive focus on violence in recent work on visual culture and presents a completely new research agenda within the overall framework of visual peace research. Critically engaging with both photojournalism and art photography in light of peace theories, it looks for visual representations or anticipations of peace – peace or peace as a potentiality – in the work of selected photographers including Robert Capa and Richard Mosse, thus reinterpreting photography from the Spanish Civil War to current anti-migration politics in Europe. The book argues that peace photography is episodic, culturally specific, process-oriented and considerate of both the past and the future.

“Compiles a variety of lessons learned by field researchers, many of whom have faced demanding situations characterized by violence, profound and well-grounded distrust, and social fragmentation”--
