Several types of electric water heater issues can cause problems with water temperature. Symptoms can range from no hot water to inadequate hot water to water that's too hot. When there's no hot water, the problem can stem from lack of power, a faulty electric thermostat or a faulty upper electric heating element.

~~How to Troubleshoot Electric Water Heater Problems~~

Often, this issue is caused by the gas supply, so check to make sure your propane tank is full before you do anything else. If your gas valve or water valves are not fully opened, this could also cause the ignition to fail. Check and open gas and water valves fully.

~~6 Common Tankless Water Heater Problems and How to Solve ...~~

Make sure your cold water inlet to the water heater is open all the way. It could also be a failed heat trap nipple on top of the water heater. Less likely, but there may be a blockage somewhere in the hot water pipes (close to the water heater). This is more common in older homes especially if a previous water heater failed. Reply
