Whales are a widely distributed and diverse group of fully aquatic placentar marine mammals.They are an informal grouping within the infraorder Cetacea, usually excluding dolphins and porpoises.Whales, dolphins and porpoises belong to the order Cetartiodactyla, which consists of even-toed ungulates.Their closest living relatives are the hippopotamuses, having diverged about 40 million years ago.

Whale - Wikipedia

Whales are mammals just like we are. Just like us, they breathe air, have hair, are warm-blooded, give birth to live young, and feed their young milk. Whales are unique, beautiful, graceful and mysterious; they nurture, form friendships, innovate, grieve, play, sing and cooperate with one another.

Facts about whales - Whale & Dolphin Conservation USA

Whale, any of the larger species of aquatic mammals belonging to the order Cetacea. The term whale can be used in reference to any cetacean, including porpoises and dolphins, but in general it is applied to those more than 3 metres (10 feet) long.

whale | Definition, Types, & Facts | Britannica

Whales are at the top of the food chain and have an important role in the overall health of the marine environment. Whales play a significant role in capturing carbon from the atmosphere; each great whale sequesters an estimated 33 tons of CO2 on average, thus playing their part in the fight against climate change.

Whale | Species | WWF

There are two types of whale; baleen and toothed. The key difference between them is the way they feed and what they have inside their mouth. Baleen whales have baleen plates, or sheets, which sieve prey from seawater. Toothed whales have teeth and they actively hunt fish, squid and other sea creatures.

Whales - meet the different species - Whale & Dolphin ...

Whales are among the largest and oldest animals on Earth. They can be found in every ocean and range in size from the small dwarf sperm whale to the massive blue whale, the largest animal on the planet. Whales belong to a group of marine mammals called cetaceans. Marine mammals in the cetacean family include whales, dolphins, and porpoises.

Whales | NOAA Fisheries

Whales are large, intelligent, aquatic mammals. They breathe air through blowhole (s) into lungs (unlike fish who breathe using gills). Whales have sleek, streamlined bodies that move easily through the water.

Whales - What is a Whale? - EnchantedLearning.com

Whales belong to the order cetacea, which means that they are mammals fully adapted to aquatic life. Like all cetaceans, including dolphins and porpoises, whales are descendants of land-living animals which returned to water after living millions of years in land. Most whales can grow to be extremely large.

Whale Facts and Information

Sei (pronounced "say") whales are one of the fastest whale species. They are streamlined, with a dark back and white underside and very curved dorsal fin. The name came from seje, the Norwegian word for pollock, a type of fish because sei whales and pollock often appeared off Norway's coast at the same time. Humpback Whale: Megaptera Novaeangliae

19 Types of Whales - thoughtco.com

The two parvorders, baleen whales (Mysticeti) and toothed whales (Odontoceti), are thought to have diverged around thirty-four million years ago. Baleen whales have bristles made of keratin instead of teeth.The bristles filter krill and other small invertebrates from seawater. Grey whales feed on bottom-dwelling mollusks. Rorqual family (balaenopterids) use throat pleats to expand their mouths ...
