Wheels can be adjusted using specialist alignment equipment which measures either just the front wheels, a 2-wheel alignment which is also known as wheel tracking, or all four in relation to one another, which is known as 4-wheel alignment. 4-wheel alignment is typically the recommended service, as it provides benefits such as resetting the steering wheel to a straight position and ensuring optimum performance and driving comfort.

Wheel alignment, tyre balancing, tracking - what's the ...

Wheel alignment sometimes referred to as breaking, or tracking is part of standard automobile maintenance that consists of adjusting the angles of wheels to the car manufacturer specifications. The purpose of these adjustments is to reduce tire wear and to ensure that vehicle travel is straight and true. Alignment angles can also be altered beyond the maker's specifications to obtain a specific handling characteristic. Motorsport and off-road applications may call for angles to be adjusted well
