This volume comprises the proceedings of the 20th Annual Irish Conference on Artificial Intelligence and Cognitive Science (AICS 2009). AICS 2009 was hosted by the School of Computer Science and Informatics in University College Dublin on August 19–21, 2009. The AICS Conference is Ireland's primary meeting for those involved in the fields of artificial intelligence and cognitive science. The conference has taken place annually since 1988 and provides a forum for the exchange of ideas and the presentation of research conducted both in Ireland and worldwide. After a rigorous review process, 21 papers were selected for oral presentation, and a further seven for poster presentations. Six shorter submissions were accepted for presentation at a technology demo session. The program covered a large range of topics, with submissions covering classification techniques, biologically inspired computation, natural language processing, and applications of AI techniques for the social web and financial markets. Although traditionally the majority of AICS submissions have come from the island of Ireland, AICS 2009 attracted a couple of submissions from farther afield—Mexico and Bulgaria. AICS 2009 continued the tradition of inviting high-profile speakers from the fields. We were delighted to have two high-profile speakers give keynote talks: David R. Millen, from the IBM Watson Research Center, in Cambridge, USA, gave a paper entitled “ Use of Enterprise Social Software to Support Organization and People Sensemaking ” ; and John Riedl, Department of Computer Science, University of Minnesota, gave a talk on “ Collective Intelligence in the Social Web. ” We are most grateful to both speakers for taking time out of their busy schedules to come to Ireland and attend AICS.

When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"—smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and

drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

The first major book on MDM written by Group Policy and Enterprise Mobility MVP and renowned expert, Jeremy Moskowitz! With Windows 10, organizations can create a consistent set of configurations across the modern enterprise desktop—for PCs, tablets, and phones—through the common Mobile Device Management (MDM) layer. MDM gives organizations a way to configure settings that achieve their administrative intent without exposing every possible setting. One benefit of MDM is that it enables organizations to apply broader privacy, security, and application management settings through lighter and more efficient tools. MDM also allows organizations to target Internet-connected devices to manage policies without using Group Policy (GP) that requires on-premises domain-joined devices. This makes MDM the best choice for devices that are constantly on the go. With Microsoft making this shift to using Mobile Device Management (MDM), a cloud-based policy-management system, IT professionals need to know how to do similar tasks they do with Group Policy, but now using MDM, with its differences and pitfalls. • What is MDM (and how is it different than GP) • Setup Azure AD and MDM Auto-Enrollment • New PC Rollouts and Remote Refreshes: Autopilot and Configuration Designer • Enterprise State Roaming and OneDrive Documents Roaming Renowned expert and Microsoft Group Policy and Enterprise Mobility MVP Jeremy Moskowitz teaches you MDM fundamentals, essential troubleshooting techniques, and how to manage your enterprise desktops.
