The W and Z bosons are together known

Online Library Z A R 1 W Hexagon

as the weak or more generally as the intermediate vector bosons. These elementary particles mediate the weak interaction; the respective symbols are W^+ , W^- , and Z^0 . The W^\pm bosons have either a positive or negative electric charge of 1 elementary charge and are each other's antiparticles. The Z^0 boson is

Online Library Z A R 1 W

Hexagon

electrically neutral and is its own antiparticle.

W and Z bosons - Wikipedia

If a non-zero complex number z is given in polar form as $z = re^{i\theta}$ (r and θ real numbers, with $r > 0$), then $w = \ln(r) + i\theta$ is one logarithm of z . Since $z = re^{i(\theta + 2\pi)}$
